SELOC Marine maintenance and repair manuals offer the most comprehensive, authoritative information available for outboard, inboard, stern-drive and diesel engines, as well as personal watercraft. SELOC has been the leading source of how-to information for the marine industry since 1974. Designed and written to serve the needs of the professional mechanic, do-it-yourself boat enthusiast, instructor and

student, these manuals are based on actual teardowns done by Chilton Marine's editors/authors in our on-site facility. Providing complete coverage on everything from basic maintenance to engine overhaul, every manual features:

- Simple-to-follow, step-by-step, illustrated procedures
- Hundreds of exploded drawings, photographs and tables
- Troubleshooting sections, accurate specifications and wiring diagrams
- Recognized and used by technical trade schools as well as the U.S. military

Covers all 2-60 Hp, 1

and 2-cylinder models,
2-stroke models. Over 1,180
illustrations

Outboard Engines fills the gap
between owner's manuals
that don't even tell you how
to change a spark plug and
professional shop manuals
that detail how to do a
complete rebuild. It covers
basic principles and
techniques for a wide variety
of outboards - four-stroke as
well as two-stroke - with the
emphasis on maintenance and
advanced troubleshooting. Ed
Sherman's clear explanations
and diagrams take you step
by step through the basics

and beyond, helping you track down even the most elusive problems a modern outboard can throw in your way. his methodical approach can save you a world of frustration - and peril - as well as time-and-a-half weekend mechanics' charges.

acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy. This illustrated history chronicles electric and hybrid cars from the late

19th century to today ' s fuel cell and plug-in automobiles. It describes the politics, technology, marketing strategies, and environmental issues that have impacted electric and hybrid cars ' research and development. The important marketing shift from a " woman ' s car " to " going green " is discussed. Milestone projects and technologies such as early batteries, hydrogen and bio-mass fuel cells, the upsurge of hybrid vehicles, and the various regulations and market forces that have shaped the industry are also covered.
