Early in 1892, one of Norway's finest boat builders launched a sailing legend. Over 100 years later Shane Granger and Meggi Macoun were peacefully

blooms, toxic algae, red tides, or harmful algae, are all terms for naturally occurring phenomena that have occurred throughout recorded history. About 300 hundred species of micro algae are reported at times to form mass occurrence, so called

blooms. Nearly one fourth of these species are known to produce toxins. Even non-toxic algal blooms can have devastating impacts when they lead to kills of fish and invertebrates by generating anoxic conditions. Some algal species, although non-toxic to

humans, can produce exudates that can cause damage to the delicate gill tissues of fish (raphidophytes *Chattonella*, *Heterosigma*, and dinoflagellates *Karenia*, *Karlodinium*) . Aquatic animals can suffer devastating mortalities, which could lead

economical and food losses, and eventually became a food security problem. Of greatest concern to humans are algal species that produce potent neurotoxins that can find their way through shellfish and fish to human consumers where they evoke a

Many subjects relevant to life and living are not taught in school. One of them is 'How to Get Rich'. When you work for someone else, your salary is determined

by that person; a portion of that salary will have to be used to pay annual taxes, another for rent, and another still for transportation and yet another for daily expenses. Eventually, you will be left with just enough for your food for the month. "Entrepreneurs, on the other hand think

for themselves. They learn to maximize their manpower or facilities while they supervise to gain income from the work done by others, and enjoy the profits that this brings in. They work to build wealth and not just to earn an income." This book is meant to provide you with a

Fifty years ago--on April 26,

*Page 52/77*

1956--the freighter Ideal X steamed from Berth 26 in Port Newark, New Jersey. Flying the flag of the Pan-Atlantic Steamship Company, she set out for Houston with an unusual cargo: 58 trailer trucks lashed to

*Page 53/77*

her top deck. But they weren't trucks--they were steel containers removed from their running gear, waiting to be lifted onto empty truck beds when Ideal X reached Texas. She docked safely, and a revolution

*Page 54/77*

was launched--not only in shipping, but in the way the world trades. Today, the more than 200 million containers shipped every year are the lifeblood of the new global economy. They sit stacked on

*Page 55/77*

thousands of "box boats" that grow more massive every year. In this fascinating book, transportation expert Brian Cudahy provides a vivid, fast-paced account of the container-ship revolution--from the maiden

*Page 56/77*

voyage of the Ideal X to the entrepreneurial vision and technological breakthroughs that make it possible to ship more goods more cheaply than every before. Cudahy tells this complex story easily, starting with Malcom

*Page 57/77*

McLean, Pan-Atlantic's owner who first thought about loading his trucks on board. His line grew into the container giant Sea-Land Services, and Cudahy charts its dramatic evolution into Maersk Sealand, the largest container

*Page 58/77*

line in the world. Along the way, he provides a concise, colorful history of world shipping--from freighter types to the fortunes of steamship lines--and explores the spectacular growth of global trade fueled by the mammoth

*Page 59/77*

ships and new seaborne lifelines connecting Asia, Europe, and the Americas. Masterful maritime history, *Box Boats* shows how fleets of these ungainly ships make the modern world possible--with both positive and

*Page 60/77*

negative effects. It's also a tale of an historic home port, New York, where old piers lie silent while 40-foot steel boxes of toys and televisions come ashore by the thousands, across the bay in New Jersey.
