Reviewing over 100 chemical and physical methods for analysis of polymers, Manual of Plastics Analysis is so detailed and comprehensive that chemists can apply the methods - many previously unpublished - directly from the book. A genuine laboratory manual, the volume supplies prodigious amounts of up-to-date information on all types of polymers, polymer additives, volatiles, adventitious impurities, monomers, metals, and pigments. Extremely well-suited for classroom teaching, research, or industrial applications, the book contains numerous tables and figures, as well as many chemical equations illustrating its analytical techniques.

AIR FORCE MANUAL 52-31 GUIDED MISSILES FUNDAMENTALS

The Grumman F8F Bearcat was designed to defeat the nimble Japanese fighter aircraft that appeared at the end of WWII. The conflict ended before the Bearcat could be

placed into service, and although it eventually saw combat with the French in the Indo-China war, it never flew in harm's way in the U.S. Navy. One of the best piston-powered fighters ever built, the F8F could achieve a cruising speed of over 420 mph. In 1946 a Bearcat set a time-to-climb record of 10,000 feet in 94 seconds, a feat not matched until the advent of high-performance jet fighters nearly a decade later. Originally printed by Grumman and the U.S. Navy, this Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified 'Restricted', the manual was declassified and is here reprinted in book form. This affordable facsimile has been slightly

reformatted. Care has been taken however to preserve the integrity of the text.

It is rare indeed that one comes in contact with a

process or technique which impacts many technical disciplines. Ion exchange is such a process. Although many books have been written on the topic of ion exchange, most have been aimed at the specialist and the graduate engineer or chemist. The author's experience in ion exchange technology has indicated that there are many specialists in the industry who do not understand ion exchange as a process. Therefore this manual has been written to acquaint and to train. The author has provided background information and hands-on experimental units that can be used to train laboratory technicians

who later become assets in the industry. This material has been used by the author for in-house training and at the community college level with success. It is my sincere hope that the training obtained in this manual will, in some way, be used to improve the environment in which we live. Ion exchange technology has the potential to reduce pollution and improve water supplies when applied properly. In writing this manual I have had the benefit of valuable assistance. I am indebted to Wes MacGowan and Dr. F. X. McGarvey for helpful suggestions and continued encouragement to get

the job done. I have also learned much over the years from Dr. S. Fisher, D. R. Kunin, and Dr. I. Abrams. In one way or another they too have some influence, however indirect, on this modest effort.
