The legacy of Leo Hendrik Baekeland and his development of phenol formaldehyde resins are recognized as the cornerstone of the Plastics Industry in the early twentieth century, and phenolic resins continue to flourish after a century of robust growth. On July 13, 1907, Baekeland filed his "heat and pressure" patent related to the processing of phenol formaldehyde resins and identified their unique utility in a plethora of applications. The year 2010 marks the Centennial Year of the production of phenolic resins by Leo Baekeland. In 1910, Baekeland formed Bakelite GmbH and launched the manufacture of phenolic resins in Erkner in May 1910. In October 1910, General Bakelite began producing resins in Perth Amboy, New Jersey. Lastly, Baekeland collaborated with Dr. Takamine to manufacture phenolic resins in Japan in 1911. These events were instrumental in establishing the Plastics Industry and in tracing the identity to the brilliance of Dr. Leo Baekeland. Phenolic resins remain as a versatile resin system featuring either a stable, thermoplastic novolak composition that cures with a latent source of formaldehyde (hexa) or a heat reactive and perishable resole composition that cures thermally or under acidic or special basic conditions. Phenolic resins are a very large volume resin system with a worldwide volume in excess of 5 million tons/year, and its growth is related to the gross national product (GNP) growth rate globally.

The destruction of the tropical forests continues rapidly. We all know that this has global, ecological and economic consequences. The problem is of such magnitude that it can only be compared to warfare. The destruction of tropical forests is both detrimental to the global ecology as well as posing a serious threat to the people living in these areas. Furthermore, the overutilization of such a valuable resource poses a serious threat to the next generations. Besides the problem generated for the people in these regions, and for the earth in general, there is a moral obligation to preserve the vast biological diversity in the tropical forests. We have a commitment to all species on earth as well as man and, therefore, need to preserve as many as possible, if not all. This book discusses the problem from different angles: from forestry, ecology and nature conservation. The two main problem areas are: first the wise utilization of that portion of the forest which will be used - especially the introduction of planned forestry in such areas and second the development of a good plan for nature conservation in the tropics.

By considering these claims and disorders in detail, this book introduces readers to a new view of thought and consciousness that will change the way readers see themselves and others."--Jacket.

This book, *Organic Fertilizers - From Basic Concepts to Applied Outcomes*, is intended to provide an overview of emerging researchable issues related to the use of organic fertilizers that highlight recent research activities in applied organic fertilizers toward a sustainable agriculture and environment. We aimed to compile information from a diversity of sources into a single volume to give some real examples extending the concepts in organic fertilizers that may stimulate new research ideas and trends in the relevant fields.

Written by a leading expert on Belize, an award-winning reporter, newspaper and magazine editor, contributor to leading publications around the world including the *New York Times*, *Caribbean Travel & Life*, *Chicago Tribune*, *Miami Herald* and the *Globe and Mail*, and author of more than 20 books, *Bug Out to Belize* can guide you to a better, more worry-free future in beautiful Belize, the friendly, affordable, frost-free and English-speaking little country on the Caribbean Coast.

This book, first appearing in German in 2004 under the title *Spezielle Relativitätstheorie für Studienanfänger*, offers access to the special theory of relativity for readers with a background in mathematics and physics comparable to a high school honors degree. All mathematical and

physical competence required beyond that level is gradually developed through the book, as more advanced topics are introduced. The full tensor formalism, however, is dispensed with as it would only be a burden for the problems to be dealt with. Eventually, a substantial and comprehensive treatise on special relativity emerges which, with its gray-shaded formulary, is an invaluable reference manual for students and scientists alike. Some crucial results are derived more than once with different approaches: the Lorentz transformation in one spatial direction three times, the Doppler formula four times, the Lorentz transformation in two directions twice; also twice the unification of electric and magnetic forces, the velocity addition formula, as well as the aberration formula. Beginners will be grateful to find several routes to the goal; moreover, for a theory like relativity, it is of fundamental importance to demonstrate that it is self-contained and without contradictions. fib Bulletin 34 addresses Service Life Design (SLD) for plain concrete, reinforced concrete and pre-stressed concrete structures, with a special focus on design provisions for managing the adverse effects of degradation. Its objective is to identify agreed durability related models and to prepare the framework for standardization of performance based design approaches. Four different options for SLD are given: - a full probabilistic approach, - a semi probabilistic approach (partial factor design), - deemed to satisfy rules, - avoidance of deterioration. The service life design approaches described in this document may be applied for the design of new structures, for updating the service life design if the structure exists and real material properties and/or the interaction of environment and structure can be measured (real concrete covers, carbonation depths), and for calculating residual service life. The bulletin is divided into five chapters: 1. General 2. Basis of design 3. Verification of Service Life Design 4. Execution and its quality management 5. Maintenance and condition control It also includes four informative annexes, which give background information and examples of procedures and deterioration models for the application in SLD. The format of Bulletin 34 follows the CEB-FIP tradition for Model Codes: the main provisions are given on the right-hand side of the page, and on the left-hand side, the comments. Note: An Italian translation of Bulletin 34 is also available; contact us for further details.

This unique book brings together a wealth of data on the botanical, ethno-medicinal and pharmacological aspects of over 500 species of Asian medicinal orchids. It starts off by explaining the role and limitations of complimentary and herbal medicines, and how traditional Asian medicine differs from Western, "scientific" medicine. The different Asian medical traditions are described, as well as their modes of preparing herbal remedies. The core of the book presents individual medicinal orchid species arranged by genera. Each species is identified by its official botanical name, synonyms, and local names. Its distribution, habitat and flowering season, uses and pharmacology are described. An overview sums up the research findings on all species within each genus. Clinical observations are discussed whenever available, and possible therapeutic applications are highlighted. The book closes with chapters on the conservation of medicinal orchids and on the role of randomized clinical trials.

The history, science, and social aspects of today's Thai agriculture is traced from hunters and gatherers through agro-cities through State-religious Empires and immigrating Tai to produce a sustainable agriculture. The wet glutinous rice culture determined administrative structures in a pragmatic society which regularly produced a saleable surplus. Continuing today, these systems consolidated the importance of rice agriculture to national security and economic well-being, as Chinese and European influence benefited agribusiness and initiated the demand which would expand agriculture through population increase until accessible land was expended. As agriculture declined in relative financial importance, it continued to provide the benefits of employment, crisis resilience, self-sufficiency, rural social support, and cultural custody. Agricultural institutions evolved from a taxation and dispute resolution base to provide research, education, and technology transfer

at levels below potential as they supported commercial agriculture funded by credit. Agribusiness expanded from the 1960s and small-holders were partly viewed as a past relic which agribusiness could modernise. Unique elements of Thai agriculture include: irrigation technologies; administrative structures based on water control; global leadership in many agricultural commodities; multinational agribusiness; negotiating approaches; potential for further increases from known technologies, and an open culture which has embraced new ideas. One of the world's few major agricultural exporters, Thailand leads the world in rice, rubber, canned pineapple, and black tiger prawn production and export, the region in chicken meat export and several other commodities, and feeds more the four times its own population from less intensive agriculture than its neighbours. Poised to benefit from expansion in livestock demand, poverty reduction, and improved education, research, and legal and social systems, evident in the recent Asian financial crisis, will be considered with popular concern for socially sensitive alternatives for small-holder farmers to co-exist with commercial agriculture. Thailand will likely remain one of the world's major agricultural countries in social, environmental and economic terms for the foreseeable future, as it addresses the continuing rural issues of poverty and inequity.

This paper describes economic developments in Grenada during the 1990s. The weak growth performance since 1990 reflected largely a continuous contraction in agricultural output, which declined each year from 1989 to 1993. The construction industry experienced a major contraction in 1992 owing to the sharp fall in public investment. In 1993, output declined in the mining and quarrying, construction, and manufacturing sectors as well as in agriculture. In contrast, the hotel and restaurant sector has exhibited strong growth since the late 1980s, with real value added growing by 13.8 percent, on average, each year since 1989.
