### **Chapter 18 Module 1 Intro to the Endocrine System**

The immune system uses the other body's other systems to protect the body by fighting of viruses. The cells involved in the process are the B-cell, T-cell, NK-cell, and Macrophage. Some of the cells can connect/work with other cells as a defense system towards the body, ultimately keeping the body healthy and free of viruses.

### **Health & PE - Module 2 & 3 Flashcards | Quizlet**

Module 2—The Endocrine System Introduction . In Module 1 you discovered how the body senses changes in your environment and then communicates these changes through the peripheral nervous system to the brain and the spinal cord. In Module 2 you will explore the endocrine system's chemical mechanisms for detecting and responding to changes in your environment, which are often called stress.

## **Module 2**

Structures of the Endocrine System. The endocrine system consists of cells, tissues, and organs that secrete hormones as a primary or secondary function. The endocrine gland is the major player in this system. The primary function of these ductless glands is to secrete their hormones directly into the surrounding fluid.
