Motion Two Dimensions Study Guide

MOTION IN TWO DIMENSIONS When solving projectile problems, use the following strategies. 1. Draw a motion diagram with vectors for the projectile at its initial position and its final position. If the projectile is launched at an angle, also show its maximum height and the initial angle. 2. Consider vertical and horizontal motion independently.

Pythagoras works the same in three dimensions as for two. For a vector $u = x\hat{i} + y\hat{j} + z\hat{k}$: Magnitude of $u = u = \sqrt{x^2 + y^2 + z^2}$ Uniform Circular Motion. If an object moves in a circular path with constant speed then it is undergoing uniform circular motion. The following statements apply to objects undergoing uniform circular
