Mouse Models Of Human Blood

As a radiation biodosimetry tool, gene expression profiling is being developed using mouse and human peripheral blood models. The impact of dose, dose-rate, and radiation quality has been studied with ...

Impact of aging on gene expression response to x-ray irradiation using mouse blood

As a follow up to a 2010 meeting deliberating on the benefits of studying mouse models of systemic lupus erythematosus (SLE), the virtual conference "Mouse models of lupus 10 years later" convened on ...

Promise and complexity of lupus mouse models

A new pre-clinical mouse model could enable the study of HIV infection and the testing of cell therapies against the virus.

New mouse model could be used to develop better HIV treatments

Having identified the histone demethylase KDM5A as a multiple myeloma target, researchers developed a KDM5 inhibitor to treat the cancer.

Novel inhibitor blocks myeloma cancer cell growth in mouse model

Brain health depends on a robust vasculature, but because of the difficulty of isolating vascular cells, researchers still know little about these cell types or how they might change in diseases such ...

Map of Human Vascular Expression Highlights its Potential Role in Alzheimer's

A team led by researchers at Weill Cornell Medicine and Children's National Hospital has developed a unique pre-clinical model that enables the study of long-term HIV infection, and the testing of new ...

New pre-clinical model could hold the key to better HIV treatments

For the first time, Cornell University researchers have developed a technique for studying the neuroscience of motor control in mice—by focusing on a mouse's tongue when it licks a water spout.

The way mice lick could reveal origins of neurological disorders

A team led by researchers at Weill Cornell Medicine and Children's National Hospital has developed a unique pre-clinical model that enables the study of long-term HIV infection, and the testing of new ...

**Unique pre-clinical model
enables study of HIV
infection and testing of new
therapies**

LIF, a protein with anti-inflammatory and neuroprotective properties, can be successfully delivered to immune cells in the brain using a nanoparticle formulation, and partially reverses induced ...

**Early Study Supports
Nanoparticle Delivery of LIF
Protein to Brain**

A new study in the journal *Frontiers in Cell and Developmental Biology* discusses the ribonucleic

acid (RNA) genome of the virus, and the mechanisms by which it establishes infection within the host
...

Facets of SARS-CoV-2 infection and animal models

In the field of cancer research, mouse models are often the system of choice. However, there are sufficient differences between humans and mice that interpretation of the results can be difficult and
...

Investigating applications for humanized mouse models in preclinical research

Furthermore, repurposing an

already existing anticancer drug showed promise in mouse models ... resected human CCM tissue, they saw the same genes were involved, which supports the idea of a ...

Cancer-linked mutation accelerates growth of abnormal stroke-causing brain blood vessels

A rare mutation in the Caps2 gene, which encodes a protein that regulates the release of brain chemicals called neurotransmitters, has also been linked with autism spectrum disorders. Now, researchers ...

Of mice and men: Mutation

Page 8/26

linked to autism impairs oxytocin-mediated social behavior

It's the smell that hits you first. The scent of urine and decomposing bodies. Then you notice other signs: scuttles and squeaks, small dead bodies leaking blood, tails sticking out of hubcaps.

Mouse plague: Bromadiolone will obliterate mice—and eagles, snakes and owls, too

This human ACE2 (hACE2) transgenic mouse expands Taconic's COVID-19 research toolkit. In October 2020, Taconic launched its first hACE2 model. The AC70 mouse experiences a lethal

response to ...

Taconic Biosciences Launches New COVID-19 Mouse Model

Researchers have mapped out the changes in metabolism that occur after a heart attack. Researchers have mapped out the changes in metabolism that occur after a heart attack, publishing their findings ...

Map of metabolic changes after heart attack holds clues to recovery
