Image fusion provides one versatile solution, where multiple aligned images acquired by different sensors are merged into a composite image. The properly fused image is more informative than any of the individual input images and can thus better interpret the scene.

[Sparse representation based multi-sensor image fusion for ...](#)
Digital image fusion is a relatively new research field at the leading edge of available technology. It forms a rapidly developing area of research in remote sensing. This review paper describes and explains mainly pixel based image fusion of Earth observation satellite data as a contribution to multisensor integration oriented data processing.

\u00a9 single data\u00a9 multi-sensor (Guyenne 1995), e.g., ERS-1/ERS-2 \u00a9 remote sensing data with ancillary data (Janssenetal.1990), e.g., image with topographic maps, (the references given are not exhaustive but meant as example). Having introduced the concept of image fusion, the following section outlines some goals of image fusion.

[Review article: Multisensor image fusion in remote sensing ...](#)
Multi-focus image fusion is a process which combines the input multi-focus images into a single image including all important information of the input images and it ' s more accurate explanation of the scene than every single input image. Why image fusion. Multi sensor data fusion has become a discipline which demands more general formal solutions to a number of application cases.

[Image fusion—Wikipedia](#)
With the availability of multisensor, multitemporal, multiresolution and multifrequency image data from operational Earth observation satellites the fusion of digital image data has become a valuable tool in remote sensing image evaluation. Digital image fusion is a relatively new research field at the leading edge of available technology. It forms a rapidly developing area of research in ...

Abstract: Multisensor image fusion is the process of combining relevant information from high spatial resolution image and high spectral resolution image. This paper proposes a new image fusion method based on Dual Tree-Complex Wavelet Transform (DTCWT), and Curvelet transform for remotely sensed lunar image data in order to extract features accurately.

[Multi-sensor image fusion of the lunar image data using DT ...](#)
Abstract: Most existing image fusion methods assume that at least one input image contains high-quality information at any place of an observed scene. Thus, these fusion methods will fail if every input image is degraded. To address this issue, this study proposes a novel fusion framework that integrates image fusion based on spectral total variation (TV) method and image enhancement.

[Multisensor Image Fusion and Enhancement in Spectral Total ...](#)
multi-resolution image fusion approaches and resulted in a General Framework for image Fusion (GFF) which is very well suitable for a fusion of multi-sensor data such as optical-optical and optical-radar imagery. Examples are presented for WorldView-1/2 and TerraSAR-X data. I. INTRODUCTION Multi-resolution image fusion also known as pan-sharpening aims to include spatial information from a high

Abstract: An enhanced intelligent diagnosis method for rotary equipment is proposed based on multi-sensor data-fusion and an improved deep convolutional neural network (CNN) models. An improved CNN based on LeNet-5 is constructed which can enhance the features of the samples by stacking bottleneck layers without changing the size of the samples.
