Netezza client software installation. This section describes how to install the Netezza® CLI clients and the

NzAdmintool. In most cases, the only applications that IBM® Netezza administrators or users must install are the client applications to access the Netezza system.

Netezza provides client software that runs on various systems such as Windows, Linux, Solaris, AIX®, and HP-UX systems.

IBM Netezza system administration. This documentation describes the administration tasks and basic operations for the IBM® PureData® System for Analytics family of appliances running the Netezza Performance Server software. Administration overview. This section provides an introduction and overview to the tasks involved in

administering an IBM Netezza® data warehouse appliance.

Full details of these and other command line options, especially redirected restore, are available in the Netezza System Admin Guide. The libxbsa API creates debug log files in the directory /usr/opensv/netb ackup/logs/exten\_client if the directory exists.
