## Neuropsychology of Cardiovascular Disease - CORE

Roughly one of every three Americans has some form of cardiovascular disease (CVD), including more than 70% of persons older than 75 years of age. Long associated with increased risk for mortality and disability, CVD is also a major risk factor for stroke and cerebrovascular disease. There has been growing consensus that CVD is also an important contributor to poor neurocognitive

outcome in ...

Neuropsychology of Cardiovascular Disease | Taylor ...

Cardiovascular disease (CVD) is the leading cause of morbidity and mortality in the United States and most westernized nations. Both CVDs and their risk factors confer substantial risk for stroke and dementia, but are also

associated with more subtle changes in brain structure and function and cognitive performance prior to such devastating clinical outcomes.

Neuropsychology of Cardiovascular Disease | Taylor ...

Neurocardiology is the study of the neurophysiological, neurological and neuroanatomical aspects of cardiology, including especially the neurological origins of cardiac disorders. The effects of stress on the

*Page 16/52*

heart are studied in terms of the heart's interactions with both the peripheral nervous system and the central nervous system. Clinical issues in neurocardiology include hypoxic-ischemic brain injury, neurogenic stress cardiomyopathy, cerebral embolism, encephalopathy, neurologic sequelae o
