## Problems

The ZD30 engine has suffered a poor reputation for premature failures including melting/cracking pistons and overboosting, largely due to some common issues. These engines run a variable vane turbocharger with boost

controlled by the ECU, and to meet stringent European emission standards run an exhaust gas recirculation (EGR) system.

to excessive stress.  
The ZD30 engine was used  
right up until the end of  
Y61 production in 2016. The  
other problem suffered by  
the ZD30 was down to the  
actual engine's slow  
responses to commands from
