This practical, real-world approach provides all of the how-tos, what-tos, when-tos, and why-tos you need to master the art and science of assessment in a well-organized, well-illustrated text that makes the material easier to learn now and reference later. The book simplifies the approach to assessment in two ways. First, it focuses on the normal and the normal variants of the adult, child, elderly, and pregnant patients that you'll see most frequently in practice. Then, when a finding falls outside of those parameters, you'll be able to identify it as abnormal. Second, assessment is presented as a linear and consistent process; so you are able to undertake the same steps in the same order to ensure that you don't miss anything.

Health Assessment in Nursing

This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is

likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.
