The final part of the open source intelligence opportunity is noticing interesting activity on the internet and actioning it, and DebateScape is a tool that we have developed that uses RSS and content scraping to monitor sources of user-generated content on the web, such as forums, and to convert activity on them into events that can be notified to subscribing applications.

**What Is Open Source Intelligence**

## **and How Is it Used?**

A foundational course in open-source intelligence (OSINT) gathering that teaches students how to find, collect, and analyze data from the Internet. This course provides the OSINT groundwork knowledge for students to be successful in their fields and enforces that knowledge with over 20 hands-on exercises.

OSINT in the open – examples of open source intelligence Pentest People's Follin recalls an OSINT engagement that found floor plans of a sensitive location online, and another where an online photo contained enough information to copy a keycard.

Open-source intelligence (OSINT)

is a multi-methods (qualitative,  
quantitative) methodology for  
collecting, analyzing and making  
decisions about data accessible in

publicly available sources to be used in an intelligence context. In the intelligence community, the term "open" refers to overt, publicly available sources (as opposed to covert or clandestine sources).
