In a project to restructure Oracle Identity Management outcomes, which stakeholders would you involve? How did the Identity management systems manager receive input to the development of a Identity management systems improvement plan and the estimated completion dates/times of each activity? What are the revised rough estimates of the financial savings/opportunity for Identity management systems improvements? At what point will vulnerability assessments be performed once Identity management systems is put into production (e.g., ongoing Risk Management after implementation)? Who is responsible for ensuring appropriate resources (time, people and money) are allocated to Identity management system? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, "What are we really trying to accomplish here? And is there a different way to look at it?" For more than twenty years, The Art of Service's Self-Assessments empower people who can do just that - whether their title is marketer, entrepreneur, manager, salesperson, consultant, business process manager, executive assistant, IT Manager, CxO etc... - they are the people who rule the future. They are people who watch the process as it happens, and ask the right questions to make the process work better. This book is for managers, advisors, consultants, specialists, professionals and anyone interested in Identity management assessment. Featuring 620 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Identity management improvements can be made. In using the questions you will be better able to: - diagnose Identity management projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Identity management and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Identity management Scorecard, you will develop a clear picture of which Identity management areas need attention. Included with your purchase of the book is the Identity management Self-Assessment downloadable resource, containing all 620 questions and Self-Assessment areas of this book. This helps with ease of (re-)use and enables you to import the questions in your preferred Management or Survey Tool. Access instructions can be found in the book. You are free to use the Self-Assessment contents in your presentations and materials for customers without asking us - we are here to help. The Art of Service has helped hundreds of clients to improve execution and meet the needs of customers better by applying business process redesign. Typically, our work generates cost savings of 20 percent to 30 percent of the addressable cost base, but its real advantages are reduced cycle times and increased quality and customer satisfaction. Identity management is the concept of providing a unifying interface to manage all aspects related to individuals and their interactions with the business. It is the process that enables business initiatives by efficiently managing the user life cycle (including identity/resource provisioning for people (users)), and by integrating it into the required business processes. Identity management encompasses all the data and processes related to the representation of an individual involved in electronic transactions. This IBM® Redbooks® publication provides an approach for designing an identity management solution with IBM Tivoli® Identity Manager Version 5.1. Starting from the high-level, organizational viewpoint, we show how to define user registration and maintenance processes using the self-registration and self-care interfaces as well as the delegated administration capabilities. Using the integrated workflow, we automate the submission/approval processes for identity management requests, and with the automated user provisioning, we take workflow output and automatically implement the administrative requests on the environment with no administrative intervention. This book is a valuable resource for security administrators and architects who wish to understand and implement a centralized identity management and security infrastructure.

Due to the proliferation of distributed mobile technologies and heavy usage of social media, identity and access management has become a very challenging area. Businesses are facing new demands in implementing solutions, however, there is a lack of information and direction. Contemporary Identity and Access Management Architectures: Emerging Research and Opportunities is a critical scholarly resource that explores management of an organization ' s identities, credentials, and attributes which assures the identity of a user in an extensible manner set for identity and access administration. Featuring coverage on a broad range of topics, such as biometric application programming interfaces, telecommunication security, and role-based access control, this book is geared towards academicians, practitioners, and researchers seeking current research on identity and access management.
