Summary: A function is a piece of code that performs a specific task. A function returns a value after execution. Both subroutines and functions offer code reusability; Both subroutines and functions help break down large chunks of code into small manageable code.

You can use VBA in Word, Access, Excel, Outlook and many other programs, including Windows itself. But it doesn't end there, you can use VBA in Excel to control Word and PowerPoint, without even needing to open those applications. What is programming? Programming is simply writing words in a way which a computer can understand.

A custom macro in excel can run for hours, in some cases, the same macro can be faster if for example the calculation is turned to manual. Depending on the amount and the complexity of the formulas you have in that workbook, inserting a row for example will take a significant amount of time to execute, it will be faster if you have less ...
