The oral board exam for the American Board of Oral and Maxillofacial Surgery (ABOMS) can be intimidating to many surgeons due to the broad range of information one must know for the exam. However, while the examination guidelines provide a general outline of topics that may be covered, there is no true direction on how to prepare for it. Traditionally, candidates do so by using what are considered “ underground ” databanks, previous test questions, and power point presentations that run the gamut of commonly covered material. Until now, there have been no current comprehensive oral board review books available for the Oral and Maxillofacial Surgery boards. Oral Board Review for Oral and Maxillofacial Surgery fills that gap as the go-to resource for those attempting to successfully challenge the oral boards and for residents to polish up on their training. Edited and authored by top physicians in the field, this book is concise and easy to read, yet thorough with high yield information. An outline of the pertinent material is reviewed, and a patient work up is presented. Important questions to ask, signs to look for, and labs/images to order are included. It also includes tables and keywords that are typically mentioned on the exam and also offers explanations to some key points. Next are cases, which are presented in a question and answer format. As the case progresses, more complicated scenarios requiring management are presented. Lastly, complications are covered, which is the final section of each board scenario. Included are basic topics the surgeon needs to know, followed by topics that are nice to know, and numerous highly debated/complex questions that are discussed among candidates preparing for the exam. It should be noted that the authors are not privy to any inside information about the exam. What is presented is material candidates that have successfully passed the exam feel is important to know. This book is not endorsed by American Association of Oral and Maxillofacial Surgeons or the American Board of Oral and Maxillofacial Surgery.

The inspirational story of an American woman who moved mountains to secure medical treatments—and eventually a home—for a young Iraqi girl severely burned in a roadside terror attack. This is a story of the astonishing power of self-sacrificial love. On a typical Sunday morning in 2006, Barbara Marlowe saw a photo that changed her life: a photo of four-year-old Teeba Furat Fadhil, whose face, head, and hands had been severely burned during a roadside bombing in the Diyala Province of Iraq. Teeba ’ s eyes captivated Barbara, and she yearned to help this child who had already endured more pain and suffering than anyone should bear. Because surgeons were fleeing the war-torn country, Teeba would be unable to receive much-needed treatments if she stayed in Iraq. With powerful faith and determination, Barbara overcame obstacle after obstacle to bring Teeba from Iraq to the United States for medical treatments. A Brave Face explores the connection forged between Barbara and Teeba ’ s Iraqi mother Dunia over the past decade—a deep bond between two mothers that has flourished despite the distance, the strife of war, and the horrors of Al-Qaeda and ISIS. With chapters written by Teeba, now a young woman, and Dunia, the three women recount the story of courage and sacrifice that bound them together. A Brave Face contains the messages that: Tremendous trust can cross borders and war zones Tragedies can turn into miracles Love can be found in the most unexpected of places In the end, this is a story of hope. A story of building bridges. A story of the always astonishing power of self-sacrificial love.

This book provides a useful framework for categorizing local flaps on the basis of their composition, blood supply, geometry and means of transfer. The initial chapters are dedicated to the fundamentals – the basic procedures, how to get started, and technical tips – as well as advice on wound care and scar management. The subsequent chapters describe the types of flaps that are traditionally taught and the 10 most common flaps. There is also a practical guide to W-plasty, Z-plasty and their various modifications, which can be applied to both scar revision and the closure of the donor sites. The book also discusses the Keystone Perforator Island Flap (KPIF) and its application to various body sites, offering elegant solutions to some very tricky situations. In turn, the book ' s final chapters are focused on assessment, decision-making an d lessons learned – essentially, how to decide if a skin graft is the better choice, matters relating to aesthetics, and dealing with complications. Rather than demonstrate exactly how to execute flaps, the book ' s primary goal is to inspire students and trainees to think about the reconstructive problem, consider all patient-related and anatomical factors, and accurately recognize what can feasibly be achieved.
