In this work, Amos Guiora defines extremism through the lens of a comparative and empirical study in order to lay the foundations for a legal response that considers the tradeoffs that may be necessary to deal with it.

This volume contains all of the presidential addresses given before the American Society for Value Inquiry since its first meeting in 1970. Contributions are by Richard Brandt*, Virgil Aldrich*, John W. Davis*, the late Robert S. Hartman*, James B. Wilbur*, the late William H. Werkmeister, Robert E. Carter, the late William T. Blackstone, Gene James, Eva Huel Cadwallader, Richard T. Hull, Norman Bowie*, Stephen White*, Burton Leiser+, Abraham Edel, Sidney Axinn, Robert Ginsberg, Patricia Werhane, Lisa M. Newton, Thomas Magnell, Sander Lee, John M. Abbarno, Ruth Miller Lucier, and Tom Regan*. Autobiographical sketches* by all of the living contributors and one recently deceased, biographical statements of the remainder, together with photographic portraits of all the contributors*, make this volume a unique record of value inquiry during the past quarter century. (* indicates previously unpublished or unpublished in the present form; + indicates substantial new material has been added.) The addresses cover diverse topics, from broad, general ones, to value inquiry into literature, bioethics, and public policy; to philosophy of mind, to critical studies of other philosophers' work, defenses of philosophy and of applied ethics, individual-, role- and cultural-relativism of values. The American Society for Value Inquiry is nearing its 25th anniversary. Its leadership is elected annually, often with a vice president becoming president-elect, then president, then past president: a structure that serves to insure a measure of continuity. Its members are drawn to the society not by a particularly credo or ideology or philosophical position, but by a common interest in questions of value, ranging from abstract meta-value inquiry to disciplinary and trans-disciplinary value inquiry. For those who share this range of passions, the volume will preserve, collect, organize, and in a number of cases recover material in danger of being lost to them. The Presidential Address is a unique genre, resembling in some ways a sermon. Indeed, preparing a presidential address before a philosophical society is often an exercise in developing an exhortation to members to take up a neglected topic, to embrace as important a particular viewpoint; it may as well be a cautionary to avoid a particular error. It is often a dramatic moment: as a last act of the presidency, having observed closely the trends and winds blowing through the discipline, the speaker is afforded the opportunity to hold forth on a topic at once intensely personal and believed to be of wide interest. While some societies publish presidential addresses in newsletters or informal proceedings, and occasionally in professional bulletins or journals, rarely have a substantial bloc of a society's presidential addresses been collected and published under one cover. Too often the presidential address is delivered, discussed by those present, perhaps summarized in a paragraph in a newsletter to members, and filed as a fond memory of a moment of honor in the papers of the author - sometimes to be forgotten, lost, discarded, or otherwise removed from availability to scholars of the history of philosophy. This volume inaugurates a series aiming at preserving presidential and other major addresses before philosophical societies. It seeks to be a historical record, not only of the address but also of the reflections and recollections of the author. It seeks to preserve as a part of the historical record a photograph of the author. And, with the personal character of an autobiographical statement, it seeks to humanize and render lively and real the professional process and motivating passions that resulted in that set of remarks before that audience on that day in history.

In this work, the author provides a compact but comprehensive research-oriented treatment of attitudes and related psychosocial constructs - values, opinions, beliefs, and personal orientations.

An Integrative Approach

How Children Become Violent

Covers critical infrastructure protection, providing a rigorous treatment of risk, resilience, complex adaptive systems, and sector dependence Wide in scope, this classroom-tested book is the only one to emphasize a scientific approach to protecting the key infrastructures components of a nation. It analyzes the complex network of entities that make up a nation's infrastructure, and identifies vulnerabilities and risks in various sectors by combining network science, complexity theory, risk analysis, and modeling and simulation. This approach reduces the complex problem of protecting water supplies, energy pipelines, telecommunication stations, power grid, and Internet and Web networks to a much simpler problem of protecting a few critical nodes. The new third edition of Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation incorporates a broader selection of ideas and sectors than the previous book. Divided into three sections, the first part looks at the historical origins of homeland security and critical infrastructure, and emphasizes current policy. The second examines theory and foundations, highlighting risk and resilience in the context of complexity theory, network science, and the prevailing theories of catastrophe. The last part covers the individual sectors, including communications, internet, cyber threats, information technology, social networks, SCADA, water and water treatment, energy, and more. Covers theories of catastrophes, details of how sectors work, and how to deal with the problem of critical infrastructure protection ' s enormity and complexity Places great emphasis on computer security and whole-community response Includes PowerPoint slides for use by lecturers, as well as an instructor's guide with answers to exercises Offers five robust appendices that augment the non-mathematical chapters with more rigorous explanations and mathematics Critical Infrastructure Protection in Homeland Security, Third Edition is an important book for upper-division undergraduates and first-year graduate students in political science, history, public administration, and computer technology. It will also be of great interest to professional security experts and policymakers.

Once upon a time only forensic psychiatrists had much to do with law and the legal system. Now, hardly a day passes in the life of a clinician without some significant encounter with the interface between the law and the practice of psychiatry. That interface extends all the way from the general regulation of clinical practice to the specifics of clinical man agement of individual patients. It includes, like the chapters of this book, such important topics as informed consent, right to treatment, privilege and confidentiality, patients' rights, competency, psychiatric testimony, malpractice, and liability. Dr. Halleck is one of the professions' most distinguished thinkers and authors in the field of psychiatry and law, and is this year's recipient of the coveted Isaac Ray Award of the American Psychiatric Association.

Having spent his entire academic and professional life deeply involved in the clinical practice of psychiatry, he is particularly well suited to understand and respond to the clinician's need for a clear and concise elucidation of those areas of psychiatry and law which are involved in the daily work of psychiatrists and all mental health professionals.

Dr. Seifert explains how a disturbance in any of early bonding and skill building can invite unwelcome and potentially dangerous consequences. We should all be held accountable for a violence-free future and with this Book from Dr. Seifert, we're provided with the groundwork to recognize and thwart any signs that may later develop into destructive, senseless patterns of violence. This is the less technical, parent version of How Children Become Violent: Keeping Your Kids Out of Gangs, Cults and Terrorist Organizations.

Aging: Concepts and Controversies is structured to encourage a style of teaching and learning that goes beyond conveying facts and methods. This innovative text focuses on controversies and questions rather than on assimilating facts or creating a single "correct" view about aging or older people. Drawing on their extensive expertise, authors Harry R. Moody and Jennifer R. Sasser first provide an overview of aging in three domains: aging over the life course, health care, and socioeconomic trends. Each section then includes data and conceptual frameworks, helping students to make sense of the controversies and understand their origin, engage in critical thinking, and develop their own views. The Tenth Edition of this hallmark textbook includes amplified discussions focused on differences, diversity, structural inequalities, and inclusion, as well as contemporary issues, including climate change and immigration. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides. Social defence is nonviolent community resistance to aggression and repression, as an alternative to military forces. Given the enormous damage caused by military systems, social defence is an alternative worth investigating and pursuing. Since the 1980s, J?rgen Johansen and Brian Martin have been involved in promoting social defence. In this book, they provide an up-to-date treatment of the issues. They address the downsides of military systems, historical examples of nonviolent resistance to invasions and coups, key ideas about social defence, important developments since the end of the Cold War, and the role of social movements. Social defence challenges deeply embedded assumptions about violence and defence. It is also a challenge to powerful groups with vested interests in systems of organised violence, especially militaries and governments. Popular action against aggression and repression is a radical alternative ? and a logical one.

Unimaginable Atrocities

This memoir describes the many unexpected things that occurred during Ted Davidson's unique research among Chicano prisoners at San Quentin Prison and in the Chicano movement in California, from 1966 until 1997. www.danger-trust.com. He reached the depths of the prisoners' own illegal culture via the secretive deadly if crossed Mexican Mafia.A very few highlights during those 31 years: Ted was kicked out of San Quentin by prison administrators for revealing staff secrets to the media. He was repeatedly set up by undercover FBI agent provocateurs posing as students, who tried to provoke him into doing things he would never imagine doing. Ted was fired from Cabrillo College for criticizing California Department of Corrections and protesting the U.S. bombing of Cambodia. He wrote a popular ethnography, Chicano Prisoners: The Key to San Quentin--in print from 1974 until 2002. Ted lived under a death threat against him and his family for six weeks. He cut his San Quentin and Chicano ties in 1979. Still, in 1997, Ted wisely refused to testify in a case against 12 Mexican Mafia members who were convicted by the U.S. government of racketeering, conspiracy, murder and extortion.

This book provides a detailed and comprehensive guide to working with risk. It begins by looking at notions of need, vulnerability and protection and looks at the theoretical concepts of each before applying them to practice. By using this combination of theory and practice the authors are able to integrate policy for a wide range of services users, from older people to children, families and younger adults. Case studies accompany and illustrate each method and the reader is invited to engage in a number of exercises and activities to consolidate learning.

Even though youth crime rates have fallen since the mid-1990s, public fear and political rhetoric over the issue have heightened. The Columbine shootings and other sensational incidents add to the furor. Often overlooked are the underlying problems of child poverty, social disadvantage, and the pitfalls inherent to adolescent decisionmaking that contribute to youth crime. From a policy standpoint, adolescent offenders are caught in the crossfire between nurturance of youth and punishment of criminals, between rehabilitation and "get tough" pronouncements. In the midst of this emotional debate, the National Research Council's Panel on Juvenile Crime steps forward with an authoritative review of the best available data and analysis. Juvenile Crime, Juvenile Justice presents recommendations for addressing the many aspects of America's youth crime problem. This timely release discusses patterns and trends in crimes by children and adolescents--trends revealed by arrest data, victim reports, and other sources; youth crime within general crime; and race and sex disparities. The book explores desistance--the probability that delinquency or criminal activities decrease with age--and evaluates different approaches to predicting future crime rates. Why do young people turn to delinquency? Juvenile Crime, Juvenile Justice presents what we know and what we urgently need to find out about contributing factors, ranging from prenatal care, differences in temperament, and family influences to the role of peer relationships, the impact of the school policies toward delinquency, and the broader influences of the neighborhood and community. Equally important, this book examines a range of solutions: Prevention and intervention efforts directed to individuals, peer groups, and families, as well as day care-, school- and community-based initiatives. Intervention within the juvenile justice system. Role of the police. Processing and detention of youth offenders. Transferring youths to the adult judicial system. Residential placement of juveniles. The book includes background on the American juvenile court system, useful comparisons with the juvenile justice systems of other nations, and other important information for assessing this problem.

United States, it is often puritanical and usually useless in protecting society. That is also not to say that dangerous people should not be kept away from society. But while they are sequestered from the general public, we need to do what we can to ensure that they do not repeat their mistakes. This is why the author and her colleagues are in the preventative and treatment fields of psychology trying to advance. Social services, juvenile justice, criminal justice, public policy, mental health and addictions treatment, and forensic hospitals need major reform - reform that is based on research.
