science This popular text gives students a genuine foundation in business analytics, quantitative methods, and management science--and how to apply the concepts and techniques in the real world--through a

*Page 26/63*

strong emphasis on model building, computer applications, and examples. The authors' approach presents mathematical models, with all of the necessary assumptions, in clear, plain English, and then applies the

ensuing solution procedures to example problems along with step-by-step, how-to instructions. In instances in which the mathematical computations are intricate, the details are presented in a manner that ensures flexibility,

allowing instructors to omit these sections without interrupting the flow of the material. The use of computer software enables the instructor to focus on the managerial problem and spend less time on the details of the algorithms.

Computer output is provided for many examples throughout the text. Teaching and Learning Experience This text provides a solid foundation in quantitative methods and management science. Here's

*Page 30/63*

how: Students see clearly how concepts and techniques are used in real organizations. Outstanding in-text features provide reinforcement and ensure understanding. The text's use of software allows

instructors to focus on the managerial problem, while spending less time on the mathematical details of the algorithms.

have and helps  
students build  
those  
competencies by  
encouraging them

*Page 49/63*

text's activities, projects, and examples help students connect the competencies to real-world situations. Leisure Services Management begins by presenting a firm foundation of

*Page 50/63*

competency-based management.

Students will learn what management is, what the manager's role is, and how their work affects their agency and their customers. They will also explore specific

*Page 51/63*

management areas such as marketing, financial management, human resources, employee development, communication, and evaluation. Throughout the text, students will

be encouraged to apply their own experiences to the concepts being discussed to deepen their understanding of the profession. For each chapter, the authors provide experiential learning activities

that simulate real on-the-job situations. Each of these activities asks students to assume one of the many roles of a new manager. They'll learn to deal with day-to-day management activities by

*Page 54/63*

completing work assignments and projects similar to those they'll assume as a manager. The activities will help students develop the competencies they'll need in order to meet the challenges of this
