The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's anti-apartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality. LONG WALK TO FREEDOM is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest

figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life—an epic of struggle, setback, renewed hope, and ultimate triumph.

This book has grown out of graduate courses given by the author at Southern Illinois University, Carbondale, as well as a series of seminars delivered at Curtin University of Technology, Western Australia. The book is intended to be used both as a textbook at the graduate level and also as a professional reference. The topic of one-factorizations fits into the theory of combinatorial designs just as much as it does into graph theory. Factors and factorizations occur as building blocks in the theory of designs in a number of places. Our approach owes as much to design theory as it does to graph theory. It is expected that nearly all readers will have some background in the theory of graphs, such as an advanced undergraduate course in Graph Theory or Applied Graph Theory. However, the book is self-contained, and the first two chapters are a thumbnail sketch of basic graph theory. Many readers will merely skim these chapters, observing our notational conventions along the way. (These introductory chapters could, in fact, enable some instructors to use the book for a somewhat eccentric introduction to graph theory.) Chapter 3 introduces one-factors and one-factorizations. The next two chapters outline two major application areas: combinatorial arrays and tournaments. These two related areas have provided the impetus for a good deal of study of one-factorizations.

This book examines the 1871 unification of Germany through the prism of one of its 'forgotten states', the Kingdom of Württemberg. It moves beyond the traditional argument for the importance of the great powers of Austria and Prussia in controlling German destiny at this time. Bodie A. Ashton champions the significance of Württemberg and as a result all 38 German states in the unification process, noting that each had their own institutions and traditions that proved vital to the eventual shape of German unity. The Kingdom of Württemberg and the Making of Germany, 1815-1871

demonstrates that the state's government was dynamic and in full control of its own policy-making throughout most of the 19th century, with Ashton showing a keen appreciation for the state's domestic development during the period. The book traces Württemberg's strong involvement in the national question, and how successive governments and monarchs in the state's capital of Stuttgart manoeuvred the country so as to gain the greatest advantage. It successfully argues that the shape of German unification was not inevitable, and was in fact driven largely by the desires of the Mittelstaaten, rather than the great powers; the eventual Reichsgründung of January 1871 was merely the final step in a long series of negotiations, diplomatic manoeuvres and subterfuge, with Württemberg playing a vital, regional role. Making use of a wealth of primary sources, including telegrams, newspaper articles, diary entries, letters and government documents, this is a vitally important study for all scholars and students of 19th-century Germany.
