Firewall Marking - RouterOS - MikroTik Documentation

MikroTik RouterOS is the operating system of MikroTik RouterBOARD hardware. It can also be installed on a PC and will turn it into a router with all the necessary features - routing, firewall, bandwidth management, wireless access point, backhaul link, hotspot gateway, VPN server and more.

Mikrotik RouterOS - About RouterOS

The firewall implements packet filtering and thereby provides security functions that are used to manage data flow to, from and through the router. Along with the Network Address Translation it serves as a tool for preventing unauthorized access to directly attached networks and the router itself as well as a filter for outgoing traffic.

Basic router protection based on connection state and IP address type by using Firewall It is necessary to have proper firewall configuration on your routers to avoid different attacks and incorrectly formatted connections.
