The celebrated debut novel inspired by the life and marriage of Charles Dickens Alfred Gibson's funeral is taking place at Westminster Abbey, and his wife of twenty years, Dorothea, has not been invited. The Great Man's will favours his children and a clandestine mistress over the woman he sent away when their youngest child was still an infant. Dorothea hasn't left her small apartment for years, and accepts her exclusion – until an invitation to a private audience with Queen Victoria arrives. The exhilaration of finding that she has much in common with the most powerful woman in England spurs Dorothea to examine her own life more closely. Her recollections uncover deviousness and the frighteningly hypnotic power of the genius she married, but also raise questions about her own complicity in her unhappiness. Questions that finally compel her to face her grown-up children and the two women she has long felt stole her husband's her own younger sister, Sissy, and the charming actress, Miss Ricketts. This remarkable debut is as wise in the ways of the human heart as it is witty and vivid in its depiction of the charismatic Alfred Gibson, and the habits, mores, and personalities of Victorian London.

Sixteen-year-old Darcy Jones knows little about her past except that she was abandoned outside a Chicago firehouse at age five, but when the mysterious Conn arrives at her high school, she begins to discover things about her past that she is not sure she likes.

During a summer internship as an obituary writer for her local northern New Jersey newspaper, sixteen-year-old Samantha D'Angelo makes some momentous realizations about politics, ethics, her family, romance, and most importantly—herself.

""In places that know more about heaven and hell than we do, you have a reputation, Gabrielle. To them you are known as the devil's consort."" When a boy shows up near Peel Academy, all signs indicate the killer is a vampire. Ravaged throat, body drained of blood. At least that's all it appears to be when the Politia, the supernatural police force, assigns Gabrielle to the case. Now it's Gabrielle's job to figure out who did it. But after a second body turns up with the same lethal wounds, it's clear that a serial killer is stalking the island. The murders have compromised the truce between the Politia and vampires, and as long as the killer roams free, it is in danger of dissolving. If that happens, no vampire is safe from persecution, not even Gabrielle. Now Gabrielle must team up with Andre, her soulmate and the one person she's tried to stay away from, to investigate the murders before the truce dissolves. And keeping her distance is proving to be impossible. But Gabrielle has a bigger problem. The world of the dead know about her, and their whispers hint that something is coming for her. And it's coming soon.

By the second half of the twentieth century, a new branch of materials science had come into being— crystalline materials research. Its appearance is linked to the emergence of advanced technologies primarily based on single crystals (bulk crystals and films). At the turn of the last century, the impending onset of the " ceramic era " was forecasted. It was believed that ceramics would play a role comparable to that of the Stone or Bronze Ages in the history of civilization. Naturally, such an assumption was hypothetical, but it showed that ceramic materials had evoked keen interest among researchers. Although sapphire traditionally has been considered a gem, it has developed into a material typical of the " ceramic era. " Widening the field of sapphire application necessitated essential improvement of its homogeneity and working characteristics and extension of the range of sapphire products, especially those with stipulated properties including a preset structural defect distribution. In the early 1980s, successful attainment of crystals with predetermined char- teristics was attributed to proper choice of the growth method. At present, in view of the fact that the requirements for crystalline products have become more str- gent, such an approach tends to be insufficient. It is clear that one must take into account the physical – chemical processes that take place during the formation of the real crystal structure, i.e., the growth mechanisms and the nature and causes of crystal imperfections.
