Harbound. Tissue engineering aims at regenerating new tissues as well as substituting lost organs by making use of autogeneic or heterogeneic cells in combination with biomaterials, a newly emerging biomedical engineering field. The proceedings of the Second International Symposium of Tissue Engineering for Therapeutic Use held in Tokyo, Japan in October 1997demonstrate the tremendous advances achieved during the short period of time between the first and the present symposium. The papers presented at the meeting are results of contributions from biologists, materials scientists, and clinicians who reviewed and discussed the latest developments and approaches. This symposium was also aimed at informing the participants of the advances made in the Tissue Engineering Project of the Research for the Future Program sponsored by the Japan Society for the Promotion of Science (JSPS). Supervision Today!

Powers to outlaw or proscribe terrorist organisations have become cornerstones of global counter-terrorism regimes. In this comprehensive volume, an international group of leading scholars reflect on the array of proscription regimes found around the world, using a range of methodological, theoretical and disciplinary perspectives from Political Science, International Relations, Law, Sociology and Criminology. These perspectives consider how domestic political and legal institutions intersect with and transform the use of proscription in countering terrorism and beyond. The chapters advance a range of critical perspectives on proscription laws, processes and outcomes, drawing from a global range of cases including Australia, Canada, the EU, Spain, Sri Lanka, Turkey, the UK and the USA. Using single and comparative cases, the authors emphasise the impacts of proscription on freedoms of speech and association, dissent, political action and reconciliation. The chapters demonstrate the manifold consequences for diasporas and minorities, especially those communities linked to struggles overseas against oppressive regimes, and stress the significance of language and other symbolic practices in the justification and extension of proscription powers. The volume concludes with an in-depth interview on the blacklisting of terror groups with the former U.S. Director of National Intelligence, James Clapper. This book was originally published as a special issue of the journal *Terrorism and Political Violence*.

Karstological Railway Planning in Slovenia

For more than 120 years (1714 – 1837) Great Britain was linked to the German Electorate, later Kingdom, of Hanover through Personal Union. This made Britain a continental European state in many respects, and diluted her sense of insular apartness. The geopolitical focus of Britain was now as much on Germany, on the Elbe and the Weser as it was on the Channel or overseas. At the same time, the Hanoverian connection was a major and highly controversial factor in British high politics and popular political debate. This volume was the first systematically to explore the subject by a team of experts drawn from the UK, US and Germany. They integrate the burgeoning specialist literature on aspects of the Personal Union into the broader history of eighteenth- and early nineteenth-century Britain. Never before had the impact of the Hanoverian connection on British politics, monarchy and the public sphere, been so thoroughly investigated.
