Amid fears of Islamic extremism, many Europeans ask whether Muslim immigrants can integrate into historically Christian countries. Why Muslim Integration Fails in Christian-Heritage Societies explores this question and concludes that both Muslim and non-Muslim French must share responsibility for the slow progress of integration.

This open access book analyses Iberian exhortation by using knowledge accumulated in recent years to test some of the most important theories regarding Europe’s economic development. Adopting a comparative perspective, it considers the impact of early globalization on Iberian and Western European institutions, social development and political economies. In spite of globalization’s minor importance from the commercial perspective before 1750, this book finds its impact decisive for institutional development, political economies, and processes of state-building in Iberia and Europe. The book engages current historiographies and reinvigates the need to take the concept of composite monarchies as a point of departure in order to understand the period’s economic and social developments, analysing the institutions and societies resulting from contact with Iberian peoples in America and Asia. The outcome is a study that nuances and contests an excessively-negative yet prevalent image of the Iberian societies, explores the difficult relationship between empires and globalization and opens paths for comparisons to other imperial formations.

From GPO Bookstore’s Website: Authors with diverse backgrounds in science, history, anthropology, and more, consider culture in the context of the cosmos. How does our knowledge of cosmic evolution affect terrestrial culture? Conversely, how does our knowledge of cultural evolution affect our thinking about possible cultures in the cosmos? Are life, mind, and culture of fundamental significance to the grand story of the cosmos that has generated its own self-understanding through science, rational reasoning, and mathematics? Book includes bibliographical references and an index.

Black Morocco: A History of Race, and Islam chronicles the experiences, identity and achievements of enslaved black people in Morocco from the sixteenth century to the beginning of the twentieth century. Chouki El Hamel argues that we cannot rely solely on Islamic ideology as the key to explain social relations and particularly the history of black slavery in the Muslim world, for this viewpoint yields an inaccurate historical record of the people, institutions and social practices of slavery in Northwest Africa. El Hamel focuses on black Moroccans’ collective experience beginning with their enslavement to serve as the loyal army of the Sultan Ismail. By the time the Sultan died in 1727, they had become a political force, making and unmaking rulers well into the nineteenth century. The emphasis on the political history of the black army is augmented by a close examination of the continuity of black Moroccan identity through the musical and cultural practices of the Gnawa.

This is a wide-ranging 730-page account of traditional Sudanese medicine.I was born in the Sudan of Sudanese Muslim parents in Al-Dueim, on the west bank of the White Nile, central Sudan. I spent my early years in this town, and I went to school there. Since then, I have visited many towns and villages throughout the country. My mother tongue is Arabic, the main language of the country. I had a typical Sudanese childhood. I shared the daily life and activities of the people. My basic norms and values, I dare say, are those of the communities I describe in this book.At the age of four, I joined the khawla (Quranic School), learned rudimentary Arabic, and memorized the first short chapters of the Holy Book. While I was there, I gained my first insight into the inner circle of religious healers, and at an early age, I saw the maseed (colloquial for mosque) and the Sufi followers.Many families in the Sudan have their patron saints that they consult or invoke in times of stress and need. Al-Mikashfi Abu-Umar of Shikaniaba village, central Sudan, is the patron saint of our clan. At the age of five, my parents took me to his shrine, half a day’s journey from my hometown. There, I saw the local asylum, for the first time, and was excited to see the mentally ill inmates under treatment. I had my first haircut there. My parents, with other worshippers, paid homage to the holy man. An impressive scene remained deeply engraved in my memory.During my childhood, I suffered every summer from attacks of epistaxis; I bled through the left nostril. Hospital treatment did not help. One morning my father decided to try his friend shaikh Awad Rahama, a laundry man in the market place, who was known as a traditional healer as well. He was particularly noted for his effective recipes for nose bleeding. The shaikh welcomed us and asked me to sit. He washed my forehead with water, and on it wrote some Quranic verses in copying pencil. He then gave me a hijab (amulet) to wear. That was the last time I ever had epistaxis!During my early life, I wore a variety of amulets. Some were to combat the evil eye, some to ensure success at school, while others were hafidhas (protectors). Some were paper hijabs, and others were miyahya (erasure of holy verse) that I had to drink or bakhta to burn and fumigate myself with. Several types of treatment and healing séances are vivid in my memory. For example, I saw the bonesetter in action. There was one in every neighbourhood in every village or town. Many were notably skilful and experienced. They used no painkillers while setting a broken bone or manipulating a sprained joint, because they knew none, and, hence, had to work dexterously. I remember Al-faki Al-Zubair and Al-faki Hamoda, the two notable religious healers in our neighbourhood. They also led the congregation prayers, and stood as masters of ceremonies in weddings. I joined the Quranic School of the first, and had many amulets and bakhtas from the second.The therapeutic musical extravagaganza in the zar is a popular feature in northern Sudan. The zar is an exclusively women’s congregaion which lavish musical ceremonies are performed. Several times, I escaped my parents’ notice, and sometimes-even school, to sneak into one of the zar houses. I found the ceremonies fascinating, and still remember them vividly, and with pleasure. The rhythm of the zar music and the heavy fragrances that escape from the ceremony houses are unforgettable.Many Muslim Sudanese towns have religious Sufi fraternities called turuq Sufiyya (Sufi orders). In these turuq, people perform zikr, remembrance chants in praise of the Prophet Muhammad and Sufi saints. The ceremonies range from the highly rhythmic type of the Qadiriyya order, to the quiet melodies of the Burhaniyya. We joined the zikr circles whenever there was a ceremony in the neighbourhood; we danced, chanted, and always waited for that dervish who would dance himself into a trance.

The masterwork of a brilliant career, and an important document of the crisis now facing mankind. Today we find ourselves in the midst of the greatest crisis in the history of the human race. Technology has placed in our hands almost unlimited power at the very moment when we have run up against the limits of our resources aboard Spaceship Earth, as the crises of the late twentieth century—political, economic, environmental, and ethical—determine whether or not humanity survives. In this masterful summing up of an entire lifetime’s thought and concern, R. Buckminster Fuller addresses these crucial issues in his most significant, accessible, and urgent work. Critical Path traces the origins and evolution of humanity’s social, political, and economic systems from the obscure mists of prehistory, through the development of the great political empires, to the vast international corporate and political systems that control our destiny today to show how we got to our present situation and what options are available to man. With his customary brilliance, extraordinary energy, and unlimited devotion, Bucky Fuller shows how mankind can survive, and how each individual can respond to the unprecedented threat we face today. The crowning achievement of an extraordinary career, Critical Path offers the reader the excitement of understanding the essential dilemmas of our time and how responsible citizens can rise to meet this ultimate challenge to our future.

Despite recent advances in important aspects of the lives of girls and women, pervasive challenges remain. These challenges reflect widespread deprivations and constraints and include epidemic levels of gender-based violence and discriminatory laws and norms that prevent women from owning property, being educated, and making meaningful decisions about their own lives—such as whether and when to marry or have children. These often violate their most basic rights and are magnified and multiplied by poverty and lack of education. This groundbreaking book distills vast data and hundreds of studies to shed new light on deprivations and constraints facing the voice and agency of women and girls worldwide, and on the associated costs for individuals, families, communities, and global development. The volume presents major new findings about the patterns of constraints and overlapping deprivations and focuses on several areas key to women’s empowerment: freedom from violence, sexual and reproductive health and rights, ownership of land and housing, and voice and collective action. It highlights promising reforms and interventions from around the world and lays out an urgent agenda for governments, civil society, development agencies, and other stakeholders, including a call for greater investment in data and knowledge to benchmark progress.

This book provides a systematic and comprehensive treatment of the variety of methods available for applying data reconciliation techniques. Data filtering, data compression and the impact of measurement selection on data reconciliation are also exhaustively explained. Data errors can cause big problems in any process plant or refinery. Process measurements can be corrupted by power supply fluctuations, network transmission and signal conversion noise, analog input filtering, changes in ambient conditions, instrument malfunctioning, misalignment, and the wear and corrosion of sensors, among other factors. Here’s a book that helps you detect, analyze, solve, and avoid the data acquisition problems that can rob plants of peak performance. This indispensable volume provides crucial insights into data reconciliation and gors error detection techniques that are essential for optimal process control and information systems. This book is an invaluable tool for engineers and managers faced with the selection and implementation of data reconciliation software, or for those developing such software. For industrial personnel and students, Data Reconciliation and Gross Error Detection is the ultimate reference.

“ In addressing a pedagogical problem how to talk about music as if it meant something other than itself – Philip Tagg raises fundamental questions about western epistemology as well as some of its strategically mystifying discourses. With an unsurpassed authority in the field, the author draws on a lifetime of critical reflection on the experience of music, and how to communicate it without resorting to exclusionary jargon. This is a must-read book for anyone interested in music, for whatever reason: students, teachers, researchers, performers, industry and policy stakeholders, or just to be able to talk intelligently about the musical experience. ” (Prof. Bruce Johnson)

The book reports on the latest advances in and applications of fractional order control and synchronization of chaotic systems, explaining the concepts involved in a clear, matter-of-fact style. The safety of fresh meat continues to be a major concern for consumers. As a result, there has been a wealth of research on identifying and controlling hazards at all stages in the supply chain. Improving the safety of fresh meat reviews this research and its implications for the meat industry. Part one discusses identifying and managing hazards on the farm. There are chapters on the prevalence and detection of pathogens, chemical and other contaminants. A number of chapters discuss ways of controlling such hazards in the farm environment. The second part of the book reviews the identification and control of hazards during and after slaughter. There are chapters both on contamination risks and how they can best be managed. The range of decontamination techniques available to meat processors as well as such areas as packaging and storage are examined. With its distinguished editor and international team of contributors, Improving the safety of fresh meat is a standard reference for the meat industry. Learn how to identify and control hazards at all stages in the supply chain An authoritative reference on reducing microbial and other hazards in raw and fresh red meat Understand the necessity for effective intervention at each production process

This book places the main actors in environmental microbiology, namely the microorganisms, on center stage. Using the modern approach of 16S ribosomal RNA, the book looks at the taxonomy of marine and freshwater bacteria, fungi, protozoa, algae, viruses, and the smaller aquatic animals such as nematodes and rotifers, as well as at the study of unculturable aquatic microorganisms (metagenomics). The peculiarities of water as an environment for microbial growth, and the influence of aquatic microorganisms on global climate and global recycling of nitrogen and sulphur are also examined. The pollution of water is explored in the context of self-purification of natural waters. Modern municipal water purification and disease transmission through water are discussed.

Alternative methods for solid waste disposal are related to the economic capability of a society. Viruses are given special attention. By focusing on the basics, this primer will appeal across a wide range of disciplines.

Light and light-based technologies have played an important role in transforming our lives via scientific contributions spanned over thousands of years. In this book we present a vast collection of articles on various aspects of light and its applications in the contemporary world at a popular or semi-popular level. These articles are written by the world authorities in their respective fields. This is therefore a rare volume where the world experts have come together to present the developments in this most important field of science in an almost pedagogical manner. This volume covers five aspects related to light. The first presents two articles, one on the history of the nature of light, and the other on the scientific achievements of Ibn-Haitham (Alhazan), who is broadly considered the father of modern optics. These are then followed by an article on ultrastat phenomena and the invisible world. The third part includes papers on specific sources of light, the discoveries of which have revolutionized optical technologies in our lifetime. They discuss the nature and the characteristics of lasers, Solid-state lighting based on the Light Emitting Diode (LED) technology, and finally modern electron optics and its relationship to the Muslim golden age in science. The book ’s fourth part discusses various applications of optics and light in today’s world, including biophotonics, art, optical communication, nanotechnology, the eye as an optical instrument, remote sensing, and optics in medicine. In turn, the last part focuses on quantum optics, a modern field that grew out of the interaction of light and matter. Topics addressed include atom optics, slow, stored and stationary light, optical tests of the foundation of physics, quantum mechanical properties of light fields carrying orbital angular momentum, quantum communication, and Wave-Particle dualism in action.

The book deals with dream interpretation, its correct rules and procedures, drills to help understand these rules, and a large glossary of interpreted dream symbols. This, we hope, fulfills important goals regarding sleep and dreams and eliminates a great deal of superstition that surrounds them.

There are at least four reasons why a sleep clinician should be familiar with rating scales that evaluate different facets of sleep. First, the use of scales facilitates a quick and accurate assessment of a complex clinical problem. In three or four minutes (the time to review ten standard scales), a clinician can come to a broad understanding of the patient in question. For example, a selection of scales might indicate that an individual is sleepy but not fatigued; lacking alertness with no insomnia; presenting with no symptoms of narcolepsy or restless legs but showing clear features of apnea; exhibiting depression and a history of significant alcohol problems. This information can be used to direct the consultation to those issues perceived as most relevant, and can even provide a springboard for explaining the benefits of certain treatment approaches or the potential corollaries of allowing the status quo to continue. Second, rating scales can provide a clinician with an enhanced vocabulary or language, improving his or her understanding of each patient. In the case of the sleep specialist, a scale can help him to distinguish fatigue from sleepiness in a patient, or elucidate the differences between sleepiness and alertness (which is not merely the inverse of the former). Sleep scales are developed by researchers and clinicians who have spent years in their field, carefully honing their preferred methods for assessing certain brain states or characteristic features of a condition. Thus, scales provide clinicians with a repertoire of questions, allowing them to draw upon the extensive experience of their colleagues when attempting to tease apart nuanced problems. Third, some scales are helpful for tracking a patient ’s progress. A particular patient may not remember how alert he felt on a series of different stimulant medications. Scale assessments administered periodically over the course of treatment provide an objective record of the intervention, allowing the clinician to examine and possibly reassess her approach to the patient. Finally, for individuals conducting a double-blind crossover trial or a straightforward clinical practice audit, those who are interested in research will find that their own clinics become a source of great discovery. Scales provide standardized measures that allow colleagues across cities and countries to coordinate their practices. They enable the replication of previous studies and facilitate the organization and dissemination of new research in a way that is accessible and rapid. As the emphasis placed on evidence-based care grows, a clinician ’s ability to assess his or her own practice and its relation to the wider medical community becomes invaluable. Scales make this kind of standardization possible, just as they enable the research efforts that help to formulate those standards. The majority of Rating Scales in Sleep

and Sleep Disorders:100 Scales for Clinical Practice is devoted to briefly discussing individual scales. When possible, an example of the scale is provided so that readers may gain a sense of the instrument ’s content. Groundbreaking and the first of its kind to conceptualize and organize the essential scales used in sleep medicine, Rating Scales in Sleep and Sleep Disorders:100 Scales for Clinical Practice is an invaluable resource for all clinicians and researchers interested in sleep disorders.

Patricia Crone’s God’s Rule is a fundamental reconstruction and analysis of Islamic political thought focusing on its intellectual development during the six centuries from the rise of Islam to the Mongol invasions. Based on a wide variety of primary sources—including some not previously considered from the point of view of political thought—it is the first book to examine the medieval Muslim answers to questions crucial to any Western understanding of Middle Eastern politics today, such as why states are necessary, what functions they are meant to fulfill, and whether or why they must be based on religious law. The character of Muslim political thought differs fundamentally from its counterpart in the West. The Christian West started with the conviction that truth (both cognitive and moral) and political power belonged to separate spheres. Ultimately, both power and truth originated with God, but they had distinct historical trajectories and regulated different aspects of life. The Muslims started with the opposite conviction: truth and power appeared at the same time in history and regulated the same aspects of life. In medieval Europe, the disagreement over the relationship between religious authority and political power took the form of a protracted controversy regarding the roles of church and state. In the medieval Middle East, religious authority and political power were embodied in a single, divinely sanctioned Islamic community—a congregation and state made one. The disagreement, therefore, took the form of a protracted controversy over the nature and function of the leadership of Islam itself. Crone makes Islamic political thought accessible by relating it to the contexts in which it was formulated, analyzing it in terms familiar to today’s reader, and, where possible, comparing it with medieval European and modern political thought. By examining the ideological point of departure for medieval Islamic political thought, Crone provides an invaluable foundation for a better understanding of contemporary Middle Eastern politics and current world events.

The standing of French Muslims is undercut by a predominant and persistent elite public discourse that frames Muslims as failed and incomplete French citizens. This situation fosters the very separations, exclusions, and hierarchies it claims to deplore as Muslims face discrimination in education, housing, and employment. In Constructing Muslims in France, Jennifer Fredette provides a deft empirical analysis to show the political diversity and complicated identity politics of this relatively new population. She examines the public identity of French Muslims and evaluates images in popular media to show how stereotyped notions of racial and religious differences shape French public discourse. While rights may be a sine qua non for fighting legal and political inequality, Fredette shows that additional tools such as media access are needed to combat social inequality, particularly when it comes in the form of unfavorable discursive frames and public disrespect. Presenting the conflicting views of French national identity, Fredette shows how Muslims strive to gain recognition of their diverse views and backgrounds and find full equality as French citizens.

Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology. This area of research is not limited to very young and old patients & € sleep disorders reach across all ages and ethnicities. Sleep Disorders and Sleep Deprivation presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

Praying for health is a significant Islamic custom alongside seeking medical treatment, and has become a vital part of Muslim culture. There are two areas of focus in this book: the methodology and criteria of praying for health, and the results of a study on the effect of prayer on Muslim patients’ well-being. This study was conducted at Brigham and Women’s Hospital, a Harvard Medical School teaching affiliate in Boston, MA. Twenty-Five Remedies, a work by prominent contemporary Muslim scholar Said Nursi, included in this book, further enriches the scope of the subject of prayer and healing.

This book aims at providing a good, sound and easy-to-understand knowledge of the history of medicine and approaches neurology like a doctor approaches a patient: first there is a chapter on how to perform an efficient neurological history according to neuroanatomical key features, then a chapter on the bedside examination, followed by chapters on differential diagnosis, diagnostic procedures and lastly, the treatment. Neurology at the Bedside aims to provide readers with a personal clinical mentor. It takes them by the hand and guides them through the whole patient encounter from the history to the treatment, at each step pointing out what is essential and what is not. Extensive differential diagnostic flow charts and detailed treatment suggestions make it a perfect cost pocket reference for the wards. In addition, more than 50 unique case histories cover the entire spectrum of the field. Neurology at the Bedside is written for neurologists in training; residents as well as senior house officers. Also medical students, general practitioners and others with an interest in neurology will find invaluable information here that is difficult to look up in traditional textbooks or online references.
