Statistical Modeling for Biomedical Researchers. Breslow, N. E. and N. E. Day (1980). Statistical Methods in Cancer Research: Vol. 1 - The Analysis of Case-Control Studies. Lyon, France, IARC Scientific Publications. I have posted the data from Appendix I of this text...

Statistical Modeling for Biomedical Researchers: A Simple Introduction To The Analysis Of Complex Data (Cambridge Medicine (Paperback)) [William D. Dupont] on Amazon.com. \*FREE\* shipping on qualifying offers.  
Researchers have used contorted, inefficient, and arbitrary analyses to demonstrated added value in biomarkers, genes, and new lab measurements. Traditional statistical measures have always been up to the task, and are more powerful and more flexible. It 's time to revisit them, and to add a few slight twists to make them more helpful.  
It provides a comprehensive overview of traditional and novel approaches to model and interpret complex clinical, epidemiologic, and biomedical databases. In addition, an excellent and popular statistical package (Stata), widely used in the epidemiologic research population, is presented and demonstrated by using real data sets.

Statistical Modeling for Biomedical Researchers  
Leading experts in the frontiers of biostatistics and biomedical research discuss the statistical procedures, useful methods, and their novel applications in biostatistics research. Interdisciplinary in scope, the volume as a whole reflects the latest advances in statistical modeling in biomedical research, identifies impactful new directions, and seeks to drive the field forward.

Dupont's "Statistical Modeling for Biomedical Researchers" is an accessible, straightforward, easy-to-read text for students and/or researchers w/ some elementary background in biostatistics. As previous reviewers have indicated, this is largely a problem-based text, so for those of you who seek a detailed theoretical explanation of the tools presented therein, you may want to look elsewhere.

Statistical Thinking  
Utility of biomedical research is a product of appropriate study design, high quality measures, proper selection and application of statistical methods, and correct interpretations of analytical results. Biostatistics are a set of tools that are used to evaluate relationships between results in biomedical research.
