A New York Times Bestseller A Washington Post Notable Nonfiction Book of 2020 Named a Best Book of 2020 by NPR “ A fascinating scientific, cultural, spiritual and evolutionary history of the way humans breathe—and how we ’ ve all been doing it wrong for a long, long time. ” —Elizabeth Gilbert, author of Big Magic and Eat Pray Love No matter what you eat, how much you exercise, how skinny or young or wise you are, none of it matters if you ’ re not breathing properly. There is

*Page 1/38*

nothing more essential to our health and well-being than breathing: take air in, let it out, repeat twenty-five thousand times a day. Yet, as a species, humans have lost the ability to breathe correctly, with grave consequences. Journalist James Nestor travels the world to figure out what went wrong and how to fix it. The answers aren't found in pulmonology labs, as we might expect, but in the muddy digs of ancient burial sites, secret Soviet facilities, New Jersey choir schools, and the smoggy streets of São Paulo. Nestor tracks down men and women exploring the hidden science behind ancient breathing practices like Pranayama, Sudarshan Kriya, and Tummo and teams up

with pulmonary tinkerers to scientifically test long-held beliefs about how we breathe. Modern research is showing us that making even slight adjustments to the way we inhale and exhale can jump-start athletic performance; rejuvenate internal organs; halt snoring, asthma, and autoimmune disease; and even straighten scoliotic spines. None of this should be possible, and yet it is. Drawing on thousands of years of medical texts and recent cutting-edge studies in pulmonology, psychology, biochemistry, and human physiology, *Breath* turns the conventional wisdom of what we thought we knew about our most basic biological function on its head. You will never breathe the

same again.

Building an Emergency Plan provides a step-by-step guide that a cultural institution can follow to develop its own emergency preparedness and response strategy. This workbook is divided into three parts that address the three groups generally responsible for developing and implementing emergency procedures—institution directors, emergency preparedness managers, and departmental team leaders—and discuss the role each should play in devising and maintaining an effective emergency plan. Several chapters detail the practical aspects of communication, training, and forming teams to

handle the safety of staff and visitors, collections, buildings, and records. Emergencies covered include natural events such as earthquakes or floods, as well as human-caused emergencies, such as fires that occur during renovation. Examples from the Barbados Museum and Historical Society, the Museo de Arte Popular Americano in Chile, the Mystic Seaport Museum in Connecticut, and the Seattle Art Museum show how cultural institutions have prepared for emergencies relevant to their sites, collections, and regions.

Ransomware is a form of malicious software (malware) that attacks computer systems, encrypts the victim's files,

and prevents the victim from accessing their data. Ransomware attacks on critical information technology systems can cause loss of service and productivity. State and local government agencies are especially vulnerable to attacks due to their limited access to resources and lower than standard industry pay which makes it difficult to recruit top talent. This project, submitted in partial fulfillment of the requirements for the degree Master of Science in Cybersecurity, examines the issue of ransomware attacks. Utilizing National Incident Management Systems protocols created by the Federal Emergency Management Agency for natural disaster

responses, this project creates tabletop training exercises to be used by cybersecurity professionals and other government officials in order to prepare for and respond to these incidents. Trained facilitators will guide the participants through each exercise which concludes with a debriefing session. This project is designed to inform and educate those participants in order to prepare them for an actual event. This project includes a detailed description of how FEMA and NIMS operate in relation to disaster recovery and how that relates to designing a tabletop exercises geared towards responding to a ransomware attack. This project focus on ransomware attacks against

state and local government agencies since this is a growing situation that they are facing. My goal with this project is to create a tabletop exercise for agencies to implement in their training programs to better prepare them for a ransomware attack on their agencies. These tabletops are designed to simulate an actual response to a ransomware attack and will help agencies develop an idea of how prepared they are for an attack and make a plan for one.

In recent years, alternative dispute resolution (ADR) has overtaken trial litigation as a cheaper and less complicated method of resolving disputes. This is especially true in government disputes, where the financial burden of litigation falls to the taxpayer. Many overburdened state and local governments have been turning to ADR to alleviate the both the

strain on the taxpayers and the overburdened court system. For any lawyer in this field, understanding ADR isn't enough. One must understand the specific needs of state and local governments in order to succeed. This valuable guide, edited by Otto J. Hetzel and Professor Steven Gonzales, collects the thoughts and experiences of eight different ADR experts to analyze the history, usage, and future of state and local government ADR. This important information will position you for this groundbreaking change in government litigation,

"Jusionyte explores the sister towns bisected by the border from many angles in this illuminating and poignant exploration of a place and situation that are little discussed yet have significant implications for larger political discourse."—Publishers Weekly, STARRED Review  
Emergency responders on the US-Mexico border operate at the edges of two states. They rush patients to hospitals across country lines, tend to the broken bones of migrants who jump over the wall, and put out fires that know no national boundaries. Paramedics and firefighters on both sides of the border are tasked with saving lives and preventing disasters in the harsh terrain at the center of divisive national debates. Ieva Jusionyte's firsthand experience as an emergency responder provides the

background for her gripping examination of the politics of injury and rescue in the militarized region surrounding the US-Mexico border. Operating in this area, firefighters and paramedics are torn between their mandate as frontline state actors and their responsibility as professional rescuers, between the limits of law and pull of ethics. From this vantage they witness what unfolds when territorial sovereignty, tactical infrastructure, and the natural environment collide. Jusionyte reveals the binational brotherhood that forms in this crucible to stand in the way of catastrophe. Through beautiful ethnography and a uniquely personal perspective, *Threshold* provides a new way to understand politicized issues ranging from border security and undocumented migration to public access to healthcare today.

Disasters tend to cross political, jurisdictional, functional, and  
geographic boundaries. As a result, disasters often require  
responses from multiple levels of government and multiple  
organizations in the public and private sectors. This means that  
public and private organizations that normally operate  
independently must work together to mount an effective disaster  
response. To identify and understand approaches to aligning

health care system incentives with the American public's need for a health care system that is prepared to manage acutely ill and injured patients during a disaster, public health emergency, or other mass casualty event, the National Academies of Sciences, Engineering, and Medicine hosted a 2-day public workshop on March 20 and 21, 2018. This publication summarizes the presentations and discussions from the workshop.

FEMA has the statutory authority to deliver numerous disaster and non-disaster financial assistance programs in support of its mission, and that of the Department of Homeland Security, largely through grants and cooperative agreements. These programs account for a significant amount of the federal funds for which FEMA is accountable. FEMA officials are responsible and accountable for the

proper administration of these funds pursuant to federal laws and regulations, Office of Management and Budget circulars, and federal appropriations law principles.

"The signature undertaking of the Twenty-Second Edition was clarifying the QC practices necessary to perform the methods in this manual. Section in Part 1000 were rewritten, and detailed QC sections were added in Parts 2000 through 7000. These changes are a direct and necessary result of the mandate to stay abreast of regulatory requirements and a policy intended to clarify the QC steps considered to be an integral part of each test method. Additional QC steps were added to almost half of the sections." --Pref. p. iv.

In his classic book, *The Five Dysfunctions of a Team*, Patrick Lencioni laid out a groundbreaking approach for tackling the perilous group behaviors that destroy teamwork. Here he turns his focus to the individual, revealing the three indispensable virtues of an ideal team player. In *The Ideal Team Player*, Lencioni tells the story of Jeff Shanley, a leader desperate to save his uncle 's company by restoring its cultural commitment to teamwork. Jeff must crack the code on the virtues that real team players possess, and then build a culture of hiring and development around those virtues. Beyond the fable, Lencioni presents a practical framework and actionable tools for identifying, hiring, and developing

ideal team players. Whether you ' re a leader trying to create a culture around teamwork, a staffing professional looking to hire real team players, or a team player wanting to improve yourself, this book will prove to be as useful as it is compelling.
