The ethical nurture of the child is a distinct responsibility which no parent can neglect with impunity. When ignorant of the more elementary principles of punishment, parents easily fall into one of two serious errors. The use of harsh and severely arbitrary methods causes the child's fine ethical sensibilities to become dull. Through indifference or careless neglect, the child becomes willful, erratic, or self-indulgent. A study with remarkable skill, guides the parent between these two extremes. He shows that it is possible to be consistent without being harsh, gentle without being vacillating. The mastery of the art of punishment is also one of the most direct means of ethical self-culture. It is to be hoped that a careful study of this subject may result in a refinement of the attitude of parents toward each other, as well as toward their children.

ABOUT THE 'SMART READS for Kids' BOOK SERIES“Love Art, Love Learning”Welcome to the 'SMART READS for Kids' book series. Designed to expand and inspire young minds; this is a range of short educational books for children aged seven and over. These books do much more than just teach children about Art and Artists. They also act as a gateway to a much broader general knowledge base. Although one Artist's life and major works are always the central theme, wider learning is encouraged in the

following ways:

- **Geography.** When locations relevant to the Artist's life are mentioned they are always accompanied by a colourful, child-friendly map so that the opportunity to learn some world geography does not pass the young reader by.
- **History.** If the Artist's actions or inspirations were based on the current affairs of the day then a snippet of history is explained in simple terms than can be easily understood by children.
- **Vocabulary.** In general the vocabulary is uncomplicated. However, a manageable number of longer words are intentionally introduced and then reused in each book. These are always demarked by bright bold colours and are accompanied by a clear definition and pronunciation. There is also a Glossary at the end.
- **Maths.** At least one maths sentence, for example a calculation of the Artist's age or how many years ago they were born, is included in each book. A column subtraction sum to accompany the statement is always laid out somewhere nearby.
- **Concentration.** Each book is written in the friendly first person and a trail of footprints running through it always leads to a cute cartoon animal at the end. The author sometimes asks questions of the young reader (and the final section is always a quiz). These features both keep children engaged in the book and encourage them to form their own opinions. There is intentionally a high ratio of images to text.
- **Other Artists.** No artist lives in isolation; they are invariably influenced by their peers and those that have come before them. Therefore each book introduces a select few new artist's names. In this way the child's knowledge horizon of Art History is gently expanded.

"Literature's Children offers a new way of thinking about how literature for children functions didactically. It analyses the nature of the practical critical activity which the child reader carries out, emphasising what the child does to the text rather than what he or she receives from it. Through close readings of a range of so-called 'Golden Age' novels for children which continue to shape our understanding of what children's literature entails, including *The Railway Children*, *The Wind in the Willows*, *The Hobbit*, and mid-20th-century series fiction, it demonstrates how the child critic resists the processes of idealisation at work in such texts. By bringing together ideas from literary theory and the philosophy of education, drawing in particular on the work of the philosopher John Dewey, it provides a compelling new account

of the complex relationships between literary aesthetics and literary didacticism"--
