

# The Dsp Capabilities Of Arm M4 And Cortex M7 Processors

Arm DSP instruction set extensions increase the DSP processing capability of Arm solutions in high-performance applications, while offering the low-power consumption required by portable, battery-powered devices. Due to their flexibility, Arm DSP instructions touch a wide range of applications and industries.

The Dsp Capabilities Of Arm as C or C++, rather than the handcrafted assembler often

used for a proprietary DSP. ARM ' s Digital Signal Controllers, Cortex-M4 and Cortex-M7, address the need for high-performance generic code processing as well as digital signal processing applications. The key feature of the Cortex-M4 and Cortex-M7
