The Frog and the  
Nightingale by Vikram  
Seth Introduction. An  
allegory written by the  
Indian poet and novelist  
Vikram Seth, "The frog  
and the Nightingale" is  
a poem focused towards  
young readers with the  
view of educating them  
to beware of  
exploitation and to  
trust in their own

selves in the recognition of their own strengths.

A pair of a bluish patch of skin which lies on either side of a throat of male frog which acts as a resonator to make sound louder. Trunk: A trunk is dorsoventrally flattened, broad and the back side of which is raised to form a hump due to the connection between pelvic girdle and vertebra.

The frog's colour can change to some extent, expansion or contraction of pigment cells in the skin making the frog darker or lighter. Such tones may correspond more closely to the frog's background in different circumstances and help to conceal it, but in many amphibia, temperature and humidity play a part in causing colour changes.

The Life Cycle of a frog is separated into four stages. In the first stage the frogs are only eggs in the water. Once the eggs hatch and little tadpoles come out with a tail to swim in water. That is the second stage. After a couple of days the tadpoles undergo metamorphosis, where the tadpoles loose their tail and grow their

legs.

Before buying your frog, you should research the frog you would like to purchase. If you don't want to spend a lot of money, start with one

frog then gradually add more. Research what your frog eats, the temperature he should be in, and what his habitat should be. Aquatic frogs are the easiest frogs for the beginner.

Elsewhere, habitat loss is a significant cause of frog population decline, as are pollutants, climate change, increased UVB radiation, and the introduction of non-native predators and competitors. A Canadian

study conducted in 2006 suggested heavy traffic in their environment was a larger threat to frog populations than was habitat loss.
