

The Prospectors Field Book And Guide In The Search For And The Easy Determination Of Ores And Other Useful Minerals

Every prospector needs a treasure map!
Discover this map book which is the first
field guide map book of its kind, built to
help prospectors, metal detectionists, and
hobbyist prospectors narrow their search
to find gold in areas that previous
sampling by the government has shown to
have more gold. Eureka Maps Inc. has
applied a geostatistical mapping technique
to specifically identify these gold rich areas
in Boulder County, Colorado. This map

book contains a series of easy to understand maps, made with prospecting in mind. Future Eureka Maps in this series of maps will also include map books for various gold rich localities in Australia, New Zealand, Canada, and the USA. This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1917 edition. Excerpt: ... (6) Columns for Discount on Purchases and Discount on Notes on the same side of the Cash Book; (c) Columns for Discount on Sales and Cash Sales on the debit side of the Cash Book; (d) Departmental columns in the Sales Book and in the Purchase Book. Controlling Accounts.--The addition of special columns in books of original entry makes possible the keeping of Controlling Accounts. The most common examples of

such accounts are Accounts Receivable account and Accounts Payable account. These summary accounts, respectively, displace individual customers' and creditors' accounts in the Ledger. The customers' accounts are then segregated in another book called the Sales Ledger or Customers' Ledger, while the creditors' accounts are kept in the Purchase or Creditors' Ledger. The original Ledger, now much reduced in size, is called the General Ledger. The Trial Balance now refers to the accounts in the General Ledger. It is evident that the task of taking a Trial Balance is greatly simplified because so many fewer accounts are involved. A Schedule of Accounts Receivable is then prepared, consisting of the balances found in the Sales Ledger, and its total must agree with the balance of the Accounts Receivable account shown in the Trial Balance. A similar Schedule of

Accounts Payable, made up of all the balances in the Purchase Ledger, is prepared, and it must agree with the balance of the Accounts Payable account of the General Ledger." The Balance Sheet.--In the more elementary part of the text, the student learned how to prepare a Statement of Assets and Liabilities for the purpose of disclosing the net capital of an enterprise. In the present chapter he was shown how to prepare a similar statement, the Balance Sheet. For all practical...

A Modern Practical Work Dealing with Metals from Their Origin to Their Useful Application - Both Individually and as Part of Alloys - Used where Strength, Ductility, Toughness, Lightness, Color, Hardness, Cheapness, Conductivity, Or Bearing Properties are Demanded

The Prospector's Field-book and Guide in

the Search for and the Easy
Determination of Ores and Other Useful
Minerals

Oil-Field Exploration and Development.
A Practical Guide for Oil-field Prospectors
and Operators, Etc

A Book of Valuable Information for
Hunters, Trappers, Land Cruisers,
Prospectors and Men of the Trail--tells
how to Locate One's Self on the Map, Etc
Knowing where to look for gold
is a well-kept secret--and a fun,
exciting escape from our hectic
daily lives. This entertaining,
well-written book is for those
who have ever thought about
looking for gold as a hobby.

Learn about the basic geologic
properties of gold, how to plan a
gold prospecting adventure with
your family and what equipment

you'll need to do it.
Follow in the footsteps of successful gem and gold hunters and search the hills for rough diamonds, colored gemstones, lapidary minerals, precious metals and interesting minerals and rocks. Written for the geoscientist, prospector and rockhound; the first part of the book focuses on physical characteristics of gems and minerals. This is supplemented with the second part of the book that describes dozens upon dozens of colored gem, diamond, gold, mineral and rock localities using the Public Land Survey System and GPS coordinates so the reader can

visit these sites on a home computer with aerial and satellite imagery to gain an understanding of what to look for in the field. With these same coordinates, the reader can visit some occurrences, deposits and areas suggested for prospecting to further their gem hunter prospecting education and potentially lead to new discoveries. Now you can learn what to look for when searching for Mother Nature's treasure.

Modern Rockhounding and
Prospecting Handbook
Recreational Gold Prospecting
for Fun and Profit
Excerpt from Field Book of Practical
Mineralogy: How to Examine, and
Report on Mines, Designed for the
Use of Prospectors, Mining Men,
Engineers, and Others The
publication of this little volume is
the result of a long cherished plan;
although not as complete in its
discussion of the subject of ore
deposits, the examination of mines,
assaying, etc., as were the author's
original intention, these omissions
are thought to have been

compensated for in part by giving more space to the subjects of determinative mineralogy and blow-pipe analysis. In the composition and compilation of the subject matter herein contained, all due precautions have been observed in order to render the information perfectly reliable and trustworthy, and to this end all descriptions of minerals appearing in the tables were carefully compared with those given in the following named standard works on the subject of mineralogy: System of Mineralogy, by E. S. Dana; Determinative Mineralogy and Blowpipe Analysis, by Brush & Penfield. Other valuable authorities consulted are: Ore Deposits, by J. A. Phillips; Ore

Deposits of the United States and Canada, by J. F. Kemp, and A Manual of Practical Assaying, by H. V. F. Furman. The names of all authorities consulted are mentioned in the foot notes. Where inadvertently omissions have occurred and due credit has not been given, the author would esteem it a favor to have his attention called to the neglect. He would also be pleased to receive criticisms on the work so that he may be able to take advantage of them should a future edition be called for. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book

is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works. Few other geologists in history have been as successful at finding gold and other mineral deposits as the authors. The senior author discovered hundreds of gold

anomalies and was on the discovery team of one of the largest gold deposits in North America in the Kuskokwim Mountains of Alaska and made the initial discovery of an entire gold district in the Rattlesnake Hills of Wyoming, which is being touted as another Cripple Creek. Although the book focuses on Wyoming; gold is described in other western States in this first volume of two on gold in the West. The authors provide the reader with information on where to find gold, how to find gold and give four decades of combined experience to help the reader understand what to look for and how to read the geology and rock outcrops.

Trieste Publishing has a massive catalogue of classic book titles. Our aim is to provide readers with the highest quality reproductions of fiction and non-fiction literature that

has stood the test of time. The many thousands of books in our collection have been sourced from libraries and private collections around the world. The titles that Trieste Publishing has chosen to be part of the collection have been scanned to simulate the original. Our readers see the books the same way that their first readers did decades or a hundred or more years ago. Books from that period are often spoiled by imperfections that did not exist in the original. Imperfections could be in the form of blurred text, photographs, or missing pages. It is highly unlikely that this would occur with one of our books. Our extensive quality control ensures that the readers of Trieste

Publishing's books will be delighted with their purchase. Our staff has thoroughly reviewed every page of all the books in the collection, repairing, or if necessary, rejecting titles that are not of the highest quality. This process ensures that the reader of one of Trieste Publishing's titles receives a volume that faithfully reproduces the original, and to the maximum degree possible, gives them the experience of owning the original work. We pride ourselves on not only creating a pathway to an extensive reservoir of books of the finest quality, but also providing value to every one of our readers. Generally, Trieste books are purchased singly - on demand, however they may also be purchased

in bulk. Readers interested in bulk purchases are invited to contact us directly to enquire about our tailored bulk rates.

Geological background, dynamics of stream flow, how to pan for gold, and what tools to use. Non-technical but advanced book for the prospector.

Excellent glossary.

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 edition. Excerpt: ...south of Salt Lake; as, Park City, Bingham, Mercur, and Tintic. Large amounts of silver-lead ore are produced by the Park City district. This State is fifth in the production of gold and silver. It is one of the most promising fields in the West and the wise prospector will make no delay in getting into it. 606. Coal.--This State has exceedingly promising coal

fields of which but little has been published. The present fields are in Rock Cliffs, Wasatch, Weber River, and Southern districts. 607. The State produced over \$400,000 in coal in 1907, being twenty-second in rank. 608. Copper.--The chief copper districts are Bingham, Park City, Tintic, Frisco, and Alta. Less important are Little Cottonwood, Ophir, and Tutsagubet. 609. According to J. M. Boutwell, the copper ores of Bingham are the result of contact metamorphism brought about by monzonite intrusions through quartzites and limestones. The most marked mineralization is in the monzonite that has been most extensively fractured, the fractures permitting the access of the mineral solutions. This information should be of

value to prospectors and operators as well. 610. At Park City the copper ore occurs in fissure veins and replacement deposits in limestone closely associated with porphyry intrusions. 384. 611. Utah produced about \$64,000,000 worth of copper in 1907, chiefly from Bingham and Park City, Tintic, and Frisco districts. 612. Antimony.--Antimony ore is mined in the southeastern part of the State. 613. Lead.--Large amounts of lead are produced from argentiferous galena. 614. Scattered beds of pumice stone are in the northwest. 615. Mercury is produced at Mercur. 616. Valuable phosphates have been found, recent discoveries indicating that this State is a favorable field...

Mining Men; with a Description of the
Pr

This book is the most comprehensive and
up-to-date book on gold prospecting.
Within its pages is everything you need to
know to find gold today. Full of practical
information and great illustrations, it is
designed to be the one prospecting book
you will never outgrow. Whether you are a
beginner or have twenty years of prospecting
experience, you will find a wealth of new
information and tips in these pages. From

equipment operations, to the geology of how gold deposits form, to the nature of coarse gold nuggets, this book takes a unique and different approach in teaching the “ trade skills ” of prospecting. It focuses primarily on the knowledge you need to find locations rich with recoverable gold. This is critical because in the final analysis, no matter how well you operate your dredge, metal detector or other prospecting equipment, unless you can find the places where gold is located, your equipment cannot help you recover it. Travel guide book inspired by the gold prospecting origin of Colorado. Includes touring information on all the major towns founded as gold mining camps as well as summaries of each town's origin story. Includes reviews and recommendations on historic districts to visit, mines to tour, driving tours of ghost towns and places to gold pan. Includes information on 16

historic districts, 31 museums, 18 mines, 186 gold panning sites across the state of Colorado. Thoroughly researched to confirm public access to the panning sites (no private property or areas subject to mining claim has been included - unlike other books.) Written by a long-time Colorado resident and gold prospector. Based on years of research and field work. Get your share of the gold by prospecting for it in historic, urban, and remote locations across the gold districts of Colorado.

Prospector Maps for Jackson County, Colorado, US

A Handbook for Prospectors, Treating Fully of Exploratory and Preparatory Work Or the Phys! Properties of Ores, Field Geology the Occurrence (Classic Reprint)

There are countless prospecting books out there. They all teach the same general theories and show the same diagrams. While they are not bad books, in fact many are great, this book is written to take a different and simpler approach. A prospectors lifetime of knowledge is simplified and condensed into an easy to read and understand guide that will hopefully benefit those who never even held a gold pan as much as those who have spent a few years prospecting but might still have a few questions they are seeking answers to. It is the intent that this is the prospecting book

that will read as a novel, and teach every bit as much as an informational guide. What are the types of equipment available and how do I use them? What is it that I am looking for when I am prospecting? What do I do with my gold once I find it and how do I sell it? Are my black sands worth anything? What are black sands made out of? How do I find a place I can go and prospect? Is there a way to know where I should dig in a stream? How do Mining claims work? These are some of the many questions that this book was written to address. While there is no guide that can tell you how to get rich mining for gold, this guide has been written for the purpose of helping you be more likely to find gold on your future prospecting trips. It is easy to become discouraged as a prospector, or allow yourself to believe others when they say "there is no gold left to be found, the old-timers got it all". You are just a few pages

away from learning the facts; and that the gold has not all been taken and how you can get your share!

Arizona, the Copper State, not only has considerable copper, but is also rich in gold, silver and other metals. More than 16-million ounces of gold and 500-million ounces of silver mined in Arizona since the 19th century, places the state as 8th largest gold producer in the US! In this book, the author guides you to gold deposits in several mining districts, mines, and prospects using his experience as a gold hunter - a member of a geology team that found one of the largest gold deposits in history. So, take the opportunity to tap into the author's experience in searching for gold in Arizona. Prospects and mines are discussed with Public Land Survey System (PLSS) locations and/or GPS coordinates so you can visit these gold properties using aerial photography and satellite imagery available

on the internet. If you visit these in the field, access and ownership is left up to reader, as mining properties and prospects often change ownership or are abandoned. The best advice for any prospector, rock hound or geologist, is learn about geology along with prospecting techniques. Any discussion on prospecting requires some knowledge of geology, so geological terms are used throughout this book with explanations. Start your search in known gold and silver mining districts - these have proven mineral deposits. Remember, the old timers found some gold and silver, but they also overlooked many deposits and ignored those that were too low-grade to mine at low precious metal prices of the past. Today's gold price is 40 to 75 times higher than in the distant past, suggesting many so-called, 'mined-out' gold properties, could still have considerable ore. As an example, some past commercial gold mines were closed during

World War II to focus industry on mining primary and recycled metals needed for the war effort (copper, manganese, molybdenum, iron, chromium, lead, zinc, etc). Many of these gold mines remain a casualty of the war and did not reopen. But, if commercial at a \$35/ounce gold price in 1942, they are likely commercial at recent gold prices (\$1,200 to 1,500 per troy ounce). As you search for gold prospects, look for mine symbols on topographic and geological maps, and search for linear patterns of mines and prospect pits suggesting possible, continuous, linear, mineralized, fractures, veins, and structures (trends) that likely have considerable unprospected ground in between prospects. As you prospect, be careful around old mines - there are thousands in Arizona, and most have hazards you may not be familiar with such as rattlesnake dens, shafts and stopes in the middle of tunnels, unstable

rock, bad air, and unstable dynamite to name a few. Most elect to search for gold in nearby drainages and stay away from mine hazards. But in Arizona, you must be aware of land ownership, weather changes, flash floods and excessive heat. And if you explore southern Arizona, illegal aliens and drug cartels are another concern and some may be heavily armed. So, when you prospect, use caution and good judgement - and remember, you are responsible for your own actions and decisions. Gold is found in many wet and dry placers, and gold and silver also occur in veins, replacement deposits and fault-controlled deposits such as those mined by Wyatt Earp and Doc Holiday in the Tombstone Hills. Other gold deposits include rich veins at Vulture near Wickenburg, and extensive prolific, structurally-controlled, gold veins surrounding Oatman. Wet placers occur along the Colorado River near LaPaz,

Bullhead City, and Lake Havasu City in western Arizona. Other placers of note include Lynx Creek south of Prescott, and many dry gold placers such as those surrounding Quartzsite and Yuma.

The Prospectors' Manual

A Practical Manual for Prospectors and Miners

Gold Panning California

The A B C of Mining

The Mine Examiner and Prospector's Companion

Mining and Scientific Press

This book contains data on the mineral deposits themselves, broken down by magmatic, hydrothermal, secondary and placer deposits, as well as gemstones.

Determinative tables, specific geologic environment references and a glossary round out this book. This Bible should appeal to the reader who wants a deeper understanding of geologic

processes.-----I have no hesitation recommending this most useful "Bible" to all students of gemology. Not only will you enjoy reading this book, you will be amazed at what you will learn about the practical aspects of mineral identification, with the assistance of the Determinative Tables and the listing of Geologic Environments of Minerals. Its purchase is highly recommended for students. Len Ettinger's more than decades of expertise in exploration geology is obvious. This is indeed a book to teach the practically applicable basics of field mineral identification and prospecting techniques. -Revered Australian gemologist Grahame Brown, former editor of the Journal of the Gemmological Association of Australia-----The Rockhound and Prospector's Bible is more than just a basic text for the gold-panner or rockhound. It is actually a study guide

which begins by giving the reader a general introduction to Geology. This detailed, yet simple to understand volume is recommended for those who are interested in how mineral and gems came to be, rather than just giving directions to sites where they can be located. - Stanley W. Paher, in the Las Vegas Review Journal

Gold Panning California is the premiere reference source for anyone who is interested in getting started or continuing their gold prospecting in California.

Containing accurate, up-to-date prospecting information for all known panning areas in California. The write-ups for each locale include driving directions, GPS coordinates, historical information, land ownership restrictions, full-color photos, and geological background.
