

The Shipmasters Business Companion

Cruise Operations Management: Hospitality Perspectives offers a comprehensive and contextualised overview of hospitality services for the cruise industry. As well as providing a background to the cruise industry, it also looks deeper into the management issues, providing a practical guide for students and professionals alike. Since the last edition of this book was published, there have been many important developments in the industry. This third edition has been updated to include: New content on: health, safety and security, sustainability, environmental impacts of cruise operations, changing and emerging markets, professionalism and talent management, innovation and digital technologies A new chapter on 'Leadership in the cruise industry' New international case studies throughout to provide a real-world insight into the industry Additional online resources, including PowerPoint slides for instructors and student quizzes to test knowledge This comprehensive, accessible and engaging text is essential reading for all those seeking to study cruise operations management

whether for academic or vocational reasons.

Radar is a legal necessity for the safe navigation of merchant ships, and within vessel traffic services is indispensable to the operation of major ports and harbours. Target Detection by Marine Radar concentrates solely on civil marine operations and explains how marine surveillance radars detect their targets. The book is fully illustrated and contains worked examples to help the reader understand the principles underlying radar operation and to quantify the importance of factors such as the technical features of specific equipment, the weather, target reflection properties, and the ability of the operator. The precision with which targets are positioned on the radar screen and with which their progress is tracked or predicted depends on how definitely they have been detected, therefore a whole chapter has been devoted to the issue of accuracy. The various international regulations governing marine radar are examined, a brief historical background is given to modern day practice and the book does with a discussion of the ways in which marine radar may develop to meet future challenges.

The Almanac provides key astronomical information for every kind of sea-going vessel, from cruise liners to fishing boats. It contains tabulations for the Sun, Moon, planets and stars, for use in the determination of position at sea from sextant observations. It also gives details of: times of sunrise, sunset, twilights, moonrise and moonset for use in the planning of observations; interpolation and altitude correction tables; the phases of the Moon; a pole-star table; diagrams and notes for the identification of stars and planets; information on eclipses of the Sun and Moon; and the standard times of most countries. It is prepared jointly by H.M. Nautical Almanac Office and the US Naval Observatory, to meet the requirements of the Royal Navy and the US Navy.

Cruise Operations Management

The Shipmaster's Business Companion

Bulletin of Additions to the Libraries, Classified, Annotated and Indexed

A Newspaper of British and Foreign Literature

This unique book rethinks and rewrites the previous edition. It categorises simply the nine interactive legal duties of the shipmaster, analysing and relating them to laws and conventions within a single volume. Cartner on the International Law of the Shipmaster contends that command depends on decision-making, and that shipmasters are not provided sufficient, timely, relevant, and pertinent information for command decisions. The book proposes voyage planning follow the spacecraft model of the USA's National

Aeronautics and Space Administration, providing readers with a metric for command. It constructively criticises the conventions and management and is aimed at reducing catastrophes by focusing on the hitherto elusive human factor in the shipmaster. Cartner proposes that command at sea be its own profession and discipline with those called to it specifically trained in its intricacies; he argues that current ships are not designed to be command-worthy or security-worthy and that management should reorder its relationships with shipmasters as tactical managers afloat. The insights the book provides are an invaluable aid to decision making for the modern civil commander and anyone associated with this pivotal and essential profession. This book is a necessary reference and guide for shipmasters, technologists, naval architects, regulators, underwriters, students, practitioners and courts of maritime law and command worldwide.

Maritime Economics The Blackwell Companion to Maritime Economics presents a comprehensive and in-depth coverage of shipping and port economics. Featuring contributions from the most respected international specialists in the field, this reference offers up-to-date insights into maritime carriers and their markets (e.g., freight, intermodal and passenger), shipping economics (e.g., dry bulk, liquid bulk, container, regulation, taxation, seafaring, safety and piracy), ship economics (e.g., equity, bond and hedging ship finance) and port economics (e.g., governance, labor, competition, efficiency, choice, investment, clusters, inspection and security). In addition to providing a

comprehensive survey of the literature on past and current practices on a wide range of maritime topics, new empirical research on safety and piracy in shipping, ship finance, and container terminal efficiency is presented as well as original theories for maritime carriers and ports that provide greater insights into their operations. With its unprecedented breadth of coverage and range of scholarship, *The Blackwell Companion to Maritime Economics* represents the new standard resource for any and all topics related to maritime economics.

Ship management is a worldwide activity. Modern ships are sophisticated designed structures equipped with several automatic devices. It is estimated that 90 per cent of commodities transported worldwide are carried by ships. Therefore there is great interest from many private and public organizations that those ships are operating, manned, designed and maintained within international acceptable standards. The obligation of stakeholders to comply with maritime regulations is included in most statutory and commercial agreements and therefore inadequate implementation of maritime regulations exposes stakeholders to commercial risks. This book explores how the application of mathematical decision-making tools could be used to manage maritime regulations. Performance management tools are proposed which would allow stakeholders to monitor the regulatory performance of their organization in order to reduce or eliminate those commercial risks. The process of introducing an implementation process for maritime regulations worldwide is described within this text. An emphasis is put on the role of main stakeholders in the regulatory process and reasons that increase the willingness of stakeholders to participate in the implementation of regulations. This book will be of interest to scholars and students interested in the management of the shipping industry as well as ship

owners and managers who are charged with implementing maritime regulations.

The Command Companion of Seamanship Techniques is the latest work from the well-respected marine author, D J House. It contains all the information needed for command posts at sea. · All aspects of shipboard management are discussed, with special emphasis placed on health and safety. · Guidelines on how to respond to accidents and emergencies at sea · Contains the most recent SOLAS revisions and a discussion of marine law to keep you up to date with the latest rules and regulations. In order to aid learning, the book includes a number of worked examples in the text along with questions and answers at the end of chapters. The author tells you how to respond to accidents and emergencies at sea, in the event, for example of cargo contamination, collision, loss of stability due to cargo shift and damage due to flooding, fire plus loss of life/crew. In addition, the SOLAS revisions and a discussion of marine law is included to keep you up to date with all the latest rules and regulations. In order to aid learning, this book will include a number of worked examples in the text along with questions and answers at the end of chapters. D J House is senior lecturer in Nautical studies at the Nautical college, Fleetwood. His

sea-going experience includes general cargo, reefer, bulk cargo, passenger and liner trades, underwater operations, and roll-on/roll-off ferries. He is a well-known marine author and has written Seamanship Techniques Volumes 1 and 2 (combined) and he has revised Cargo Work in the Kemp & Young series.

In luck and out of luck, John Grimes was a living legend of the spaceways. He had been an officer of the service, he had been the victim of a mutiny, he had discovered lost worlds, he had served under strange masters and on strange ships, but he had never turned space pirate. Until this adventure. How it happened was a complex story to begin with, but typical Grimes luck. How he became the terror of the star lanes developed, as usual, from his own efforts to make an honest living and other's efforts to use him for devious diversions. This is a story of the loot of the stars, of how Grimes graduated from operator of a space courier ship to master of a fleet of dreaded carriers of the skull and crossbones!
