seemingly random behavior. Two trajectories of a chaotic system starting close to each other will diverge after some time (so-called “sensitive dependence on initial conditions”). Mathematically chaotic systems are characterized by local instability and global boundedness of the trajectories. Since local instability of a linear system implies

### Analysis Of Chaotic Systems

Chaos theory is a branch of mathematics focusing on the study of chaos—states of dynamical systems whose apparently random states of disorder and irregularities are often governed by deterministic laws that are highly sensitive to initial conditions. Chaos theory is an interdisciplinary

theory stating that, within the apparent randomness of chaotic complex systems, there are underlying patterns, interconnectedness, constant feedback loops, repetition, self-similarity, fractals, and ...

### Chaos theory - Wikipedia

From the introduction of the butterfly-like chaotic behavior, chaos theory has evolved to include not only integer-order chaotic but also fractional-order dynamical systems. Nowadays, the main challenges on the introduction of new chaotic systems with self-excited and hidden attractors, are devoted to design memory- elements, delay blocks, and fractional-order derivatives and integrals.
