Poems discuss a journey across the ocean, a veterans' cemetery, money, an abandoned collection of dolls, and a man who escapes from his prison cell to commit a murder

Mycenaean Greece, first published in 1976, investigates from an historical point of view some of the crucial periods in the Greek Bronze Age. The principal subject is the so-called ' Mycenaean ' culture which arose during the sixteenth century BC, as assimilation of the previous ' Helladic ' culture of mainland Greece with some of the developments of Minoan Crete. Many of the material aspects of the Mycenaean civilisation are examined, as are the extent of Mycenaean expansion overseas and the eventual destruction of Mycenaean sites which marked the end of their civilisation. The author also considers the evidence relating to the religious beliefs of the Mycenaean and their social, political and economic organisations, and he relates the Mycenaean culture to the later civilisation of Archaic and Classical Greece. There is an Appendix containing a list of Mycenaean sites, with reference to excavation reports, and a full bibliography.

The original manuscript bears no title either at the beginning or end. The text was published for the Pali Text Society by T.W. Rhys Davids with title "The Yog vacara's manual of Indian mysticism as practised by Buddhists", London, 1896.

Bonduriansky and Day challenge the premise that genes alone mediate the transmission of biological information across generations and provide the raw material for natural selection. They explore the latest research showing that what happens during our lifetimes—and even our parents' and grandparents' lifetimes—can influence the features of our descendants. Based on this evidence, Bonduriansky and Day develop an extended concept of heredity that upends ideas about how traits can and cannot be transmitted across generations, opening the door to a new understanding of inheritance, evolution, and even human health. --Adapted from publisher description.

Spanning 30 years of carefully controlled work, this book explains how nasal obstructions, the relationship between breathing patterns and vertical facial development, and secondary neuromuscular adaptations to obstructions may alter facial and dental structures. The authors describe radiographic techniques, enlargements, and measurements for both the lateral cephalogram and the 45-degree oblique view. Their discussion of clinical application of vertical changes in the jaws and dentition is a tour de force for the orthodontist, rhinologist, and pediatrician.

A Personal Note I decided to initiate Orchid Biology: Reviews and Perspectives in about 1972 and (alone or with co-authors) started to write some of the chapters and the appendix for the volume in 1974 during a visit to the Bogor Botanical Gardens in Indonesia. Professor H. C. D. de Wit of Holland was also in Bogor at that time and when we discovered a joint interest in Rumphius he agreed to write a chapter about him. I visited Bangkok on my way home from Bogor and while there spent time with Professor Thavorn Vajrabhaya. He readily agreed to write a chapter. The rest of the chapters were solicited by mail and I had the complete manuscript on my desk in 1975. With that in hand I started to look for a publisher. Most of the publishers I contacted were not interested. Fortunately Mr James Twiggs, at that time editor of Cornell University Press, grew orchids and liked the idea. He decided to publish Orchid Biology: Reviews and Per spectives, and volume I saw the light of day in 1977. I did not know if there would be a volume II but collected manuscripts for it anyway. Fortunately volume I did well enough to justify a second book, and the series was born. It is still alive at present - 20 years, seven volumes and three publishers later. I was in the first third of my career when volume I was published.

In three essays the author addresses some of the major disputes at the heart of our understanding of the coming of the Greeks'. The first paper examines the conclusion of Ernst Grumach that the Greeks entered the Aegean in a single movement at a late date, moving from the Danube basin. The second essay scrutinizes Colin Renfrew and Marija Gimbutas' hypotheses about the origins and dispersal of the earliest Greeks. The final paper discusses Robert Drew's theories about the connection between the archaeological evidence for horse-drawn chariots in the Near East and Eastern Mediterranean, and the movement of ancient peoples.

Orchids are among the most popular and widely collected of plant families, with tropical species and hybrids being cultivated the world over. The five volumes of Genera Orchidacearum will provide a complete, robust classification of the orchids, descriptions of individual species, and cultivational information. The series, superbly illustrated with colour photographs and line drawings of all the genera, will be an absolutely indispensable reference tool both for scientists and for orchid breeders and for collectors and enthusiasts.

This, the second volume of Genera Orchidacearum, covers the first 100 species of the Orchidaceae family.

Epigenetic mechanisms (DNA modifications, histone alterations and non-coding RNAs) are crucial for transcriptional regulation and alterations of the "physiological epigenome" are increasingly associated with human diseases. During the last decade the emerging field of neuroepigenomics have started to impact tremendously in areas such learning and memory, addiction or neurodegeneration. This expert volume covers the role of epigenetic molecular mechanism in regulation of central nervous system's function, one of the most exciting areas of contemporary molecular neuroscience. The book describes the current knowledge on the epigenetic basis of human disease covering the complete lifespan: from neurodevelopment/childhood (Rett Syndrome, Rubinstein-Taybi, autism), adolescence (eating disorders, drug addiction, anxiety), adulthood (depression, schizophrenia, amyotrophic lateral sclerosis, Huntington's disease) and elderly (Alzheimer's disease, Parkinson's disease). The book also covers the three major players on neuroepigenomic mechanisms: histones alterations, DNA modifications and non-coding RNAs, their roles at the molecular and cellular level and the impact of their alterations on neuronal function and behavior. Finally, a special chapter on state-of-the-art technologies helps the reader not only to understand

epigenetic driven changes in human cognition and diseases but also the methodology that will help to generate paradigm shifts on our understanding of brain function and the role of the neuroepigenome in human diseases.

This book has been written for experienced managers and students in postgraduate programs, such as MBA or specialized masters programs. In a systematic yet concise manner, it addresses all major issues companies face when conducting business across national and cultural boundaries, including assessing and selecting the most promising overseas markets, evaluating market entry alternatives, and examining the forces that drive adaptation versus standardization of the marketing mix. It looks at the various global marketing challenges from a strategic perspective and also addresses topics not usually found in international marketing texts, such as aligning marketing strategies with global organizational structures and managing the relationship between national subsidiaries, regional headquarters, and global headquarters, as well as corporate social responsibility challenges and pertinent future trends that are likely to affect global business.

Situated on the shores of the Argolic Gulf, only a few miles away from the much later prehistoric sites of Mycenae, Tiryns, and Midea, Lerna is one of the key building blocks in our understanding of Greek archaeology. The first evidence from the site is Neolithic, and the latest settlement evidence is Mycenaean. However, the most important material from the site comes from the middle of the 3rd millennium B.C. when a remarkable large, rectangular building known as The House of the Tiles was built. Possibly never finished, with unpainted walls and doors that lead nowhere, the purpose and meaning of this building has provoked vigorous debate. Was it the house of a chief and the precursor of the later Mycenaean palaces? Or was it a communal storage facility, designed to store the elaborately sealed chests and jars found inside? No less mysterious than its use is its destruction: After a violent fire, a huge mound was built on top of the charred foundations, the area avoided by later house builders. This guide is illustrated with many plans and black and white photos.

A highly original discussion of problems of philosophy of religion from the Indian point of view. The exposition shows that the Christian theologian who will take the trouble to study Indian religion seriously, and not merely "historically," will find in its teachings abundant extrinsic and probable proofs of the truth of Christian doctrine; and may at the same time realize the essential unity of all religions.

In Your Face exposes the new worldwide rebellion that's brewing against U.S. marketing. Renowned international marketing expert Johny K. Johansson explains why global customers increasingly view U.S. marketing as the first wave of a cultural assault by an arrogant, wasteful society of overfed, gas-guzzling, SUV-driving bullies. He shows why American brands are especially susceptible to attack and considers the Bush administration's disastrous repositioning of the United States. Most important, Johansson offers a new path for marketers, a path to sustainable profits, based on mutual respect, not domination.
