**How to Change Manual Transmission Fluid - Why and When to**  
Generally, it is recommended to change your manual transmission fluid after you cover at least 30,000 miles or to the max, 60,000 miles. The fluid changing gap depends on the car model greatly. If in case you are stressing your transmission, changing these fluids becomes essential after covering 15,000 miles.

**How to Replace Manual Transmission Fluid? A Complete**  
Use your car's owner's manual to determine if the transmission has a dipstick that's easily accessible; if it does, here are a few tips when checking the fluid: 1. Use your owner's manual ...

**Do You Really Need to Change the Transmission Fluid**  
When you check the transmission fluid prior to changing it, make sure the engine is turned on. If you find that your transmission fluid level is lower than it should be, then you first need to make sure there are no leaks in the system. Once you can confirm that, replace the existing fluid right away with an adequate level of new fluid. Lastly, you can easily tell if the existing transmission fluid is bad because it will look rather brownish and may even have a bad burning odor to it.

**How Often to Change Transmission Fluid (Manual and Automatic)**  
How often should I change my transmission fluid? You should definitely change it at the recommended mileage regardless of whether you have a manual or an automatic transmission. Manual: Most manufacturers recommend that manual transmission fluid be changed every 30,000 to 60,000 miles. Under heavy-duty use, some manufacturers suggest changing transmission fluid every 15,000 miles.

**Transmission Fluid | Car Talk**  
Never let an express lube place change your transmission fluid manual or automatic. Most manual transmissions are just topped off with gear oil. Make sure you use the proper weight for your transmission as your vehicle calls for "Synchromesh Transaxle Fluid". It's your call on the fluid change.

**Change manual transmission fluid? - Car Talk Community**  
When changing your transmission fluid, you open the transmission drain located on the underside of the car. This allows about 40% to 50% of the transmission fluid to drain out into the pan. The other 50%-60% of the fluid remains in the torque converter and other parts of the transmission. Flushing your transmission, on the other hand, allows you to completely change all of the fluid in the transmission.

**Can Changing Your Transmission Fluid Cause Damage? - M&J**  
Checking the transmission fluid in a manual transmission car is slightly different than for those with automatic transmissions. Manual transmissions consist of internal gears, bearings, and synchronizers that are allow the driver to shift gears. Many manual transmissions are lubricated with a heavy petroleum-based oil.

**How to Check Manual Transmission Fluid | YourMechanic Advice**  
How to Change the Manual Transmission Fluid: If you need your transmission for the life of the car, it is essential that you routinely change your transmission fluid, follow your owner's rules and a few rules of common sense. In the present day of dispensable everything - regardless of your transfer can be a reality check for your wallet.

**How to Change Manual Transmission Fluid (An Easy Guideline)**  
Due to all the mechanical components in a manual transmission, it needs fluid changes a lot more often than automatic transmission do. The average manufacturer will recommend that you change the fluid in a manual transmission about every 30,000 miles. Sometimes they will even let you go up to 60,000 miles before the next fluid change.

**How Often to Change Car Transmission Fluid in Manual and**  
These tools we need for change the transmission liquid. In order to change transmission liquid in the gearbox, you need the following tool: a socket wrench 13, screwdriver T25, a cap wrench 17, a high nut (25-30mm) for a wrench 17, a container for collecting oil and special syringe for pouring oil in gearbox.
