

Ulnar Nerve Decompression Procedure Code

Medial epicondylectomy: This procedure for ulnar nerve release and ulnar nerve decompression removes part of the medial epicondyle. Similar to the ulnar nerve transposition, this procedure prevents the nerve from getting caught on the bony ridge of the elbow when bent. It is rare for this procedure to be required.

~~Cpt Code For Ulnar Nerve Decompression~~

~~CPT Code: 64718 / 24358. An Ulnar nerve anterior transposition is a procedure where the nerve is moved from its place behind the medial epicondyle to a new place in front of it. This is called an anterior transposition of the ulnar nerve. The nerve can be moved to lie under the skin and fat but on top of the muscle (subcutaneous transposition), within the muscle (intermuscular transposition) or under the muscle (submuscular transposition).~~
