started riding horses when she was 13 years old and had her first registered Quarter horse by the age of 14. The chestnut nightmare that was then hers was the most imperfect horse a beginner could ask for in life, but the mare was hers. Together they learned from very difficult lessons in respect, riding, showing,

and life. Amanda credits the mare, named Molly, with getting her through some very difficult teenage years. Molly stayed with her until she died at the age of 26. Throughout the years, Amanda had several other horses, rode for others, and even worked as a groom. The numerous people she had the blessed

opportunity to get to know have offered words of caution and wisdom over the years. Most of these words were from highly experienced horse men and women and have been shared in the pages of this book. Hopefully you will gain and knowledge and inspiration from what is shared. HowExpert

Understanding and patience that you require for having the

*Page 140/151*

pony as a pet is not the end of caring about horses. Undivided heed and understanding the nature of the animal to provide it with its natural herd environment is the call of the hour to raise your animal properly. To the horse, the instinct is always instant action because for them action is survival. In a herd, the

*Page 141/151*

horses regularly take turns sleeping and warn the group during a predator attack where they take flight. From the very first day in the life of a foal, it starts with its learning journey imbibing all the qualities from its immediate environment. Very extensive knowledge about the animal is required to give it

proper growth and development.

Maintaining a subdued profile around the animal is essential. As it is in the wild, their survival depends on the early detection of that approaching predator the horses simply do not like undue attention and unnecessary blare. It is quite common that the mount can get disturbed

by any unnecessary blast and cause injury to the people around it. A reassuring quiet voice is required while talking to your horse. While keeping a horse as a pet one should always remember that the animal will normally not relate to a human being but as is the case with most domestic animals an alliance often a very

strong bond grows  
between the animal and  
its alternate provider  
given there is trust,  
fondness for compliance  
and a crave to desire  
and obey.

This covers the basics of  
hoof care and  
horseshoeing. Topics  
range from simple  
cleaning to trimming  
and shoeing the foot to  
dealing with hoof

injuries and complex lameness problems. It also described how to achieve healthy hooves through proper nutrition, conscientious care, and proper use of the horse.
