Unit 6 – Exponents, Exponents, Exponents and More Exponents. This unit begins with a fundamental treatment of exponent rules and the development of negative and zero exponents. We then develop the concepts of exponential growth and decay from a fraction perspective. Finally, percent work allows us to develop growth models based on constant percent rates of change.

~~Unit 6 — Exponential Functions — Mr. Lui's Math Website~~

So a logarithm actually gives you the exponent as its answer: (Also see how Exponents, Roots and Logarithms are related.) Working Together. Exponents and Logarithms work well together because they "undo" each other (so long as the base "a" is the same): They are "Inverse Functions" Doing one, then the other, gets you back to where you started:

~~Working with Exponents and Logarithms — MATH~~

In middle school, students learned about integer powers—first positive and then also negative. In Algebra 2, we extend this concept to include rational powers. We will define how they work, and use them to rewrite exponential expressions in various ways.

~~Rational exponents and radicals | Algebra 2 | Math | Khan ...~~

Exponential Equations. An exponential equation is one in which a variable occurs in the exponent, for example, $a^x = b$. When both sides of the equation have the same base, the exponents on either side are equal by the property if $a^x = a^y$, then $x = y$. Logarithmic Equations. An equation that involves the logarithm of an expression containing a variable.

So put the decimal right over there and I'll put the zero, so 0.81. Another way to think about it is nine-tenths of nine-tenths is 81 hundredths, but there you go. Using exponents, or taking exponents of decimals is the same as when we're taking it of integers. It's just in this case you just have to do a little bit of decimal multiplication.
