

Vitamin D Physiology Molecular Biology And Clinical Applications Volume

Page 1/87

1 Nutrition And Health

Severe vitamin D deficiency causes rickets or osteomalacia, where the new bone, the osteoid, is not mineralized. Less severe

Page 2/87

vitamin D deficiency causes an increase of serum PTH leading to bone resorption, osteoporosis and fractures. A negative relationship exists between serum 25(OH)D and serum PTH.

Vitamin D: Physiology, Molecular Biology, and Clinical Applications

Page 3/87

is the first volume in this series. It is not unexpected that a new book reviewing recent advances in our understanding of the biology and clinical application of vitamin D should appear.

Vitamin D: Physiology, Molecular
Biology, and Clinical ...

Since the pivotal research in the

Page 10/87

1960s on the metabolism of vitamin D there has been intense research activity in a number of related areas, including the synthesis and metabolism of vitamin D metabolites and analogues, the molecular biology of the vitamin D receptor, and the

Page 11/87

mechanisms by which
1,25-dihydroxyvitamin D affects
the renal, intestinal, and skeletal
transport of calcium.

Biology, and Clinical Applications is the first volume in this series. It is not unexpected that a new book reviewing recent advances in our understanding of the biology and clinical application of vitamin D should appear.

Vitamin D: Physiology, Molecular Biology, and Clinical ...

Severe vitamin D deficiency causes rickets or osteomalacia, where the new bone, the osteoid, is not mineralized. Less severe vitamin D deficiency causes an increase of serum PTH leading to

Page 14/87

bone resorption, osteoporosis and fractures. A negative relationship exists between serum 25(OH)D and serum PTH.

Vitamin D physiology.

Physiology The two main forms of vitamin D are: vitamin D3 or

cholecalciferol, which is formed in the skin after exposure to sunlight or ultraviolet light, and ergocalciferol or vitamin D2 which is obtained by irradiation of plants or plant materials or foods.

Review Vitamin D physiology -

Page 16/87

MeanderMC

Vitamin D supplementation to vitamin D-deficient elderly results in an increase of serum 25(OH)D levels and decrease of serum PTH and an increase of bone mineral density. This increase may depend on variations in the vitamin D

Page 17/87

receptor DNA structure, so called polymorphisms.

Vitamin D physiology -
ScienceDirect

Dr. Pike ' s laboratory is focused on the molecular mechanisms whereby vitamin D, the sex

Page 18/87

steroids, and other systemic hormones regulate the production as well as cellular activity of bone-forming osteoblasts and bone-resorbing osteoclasts.
