In 2009, the PRC overtook the USA as the biggest automotive market in the world in production as well as in sales. With economic problems like stagnating real income, rising raw material prices and credit-driven consumerism in the industrial countries the importance of the Chinese market for car companies will even grow. Saturated passenger car markets in the USA and Western Europe and low rates of motorization in new automotive markets like China focus the attention of the market participants on these new, growing markets. The focus of this study is on the passenger vehicle market and lines out why the Chinese market is profitable and attractive for international manufacturers. Moreover, it shows how to deal with the problems and how to use the opportunities regarding the dimensions of internationalization. Firstly, the PEST-Analysis of the Chinese automobile market lines out the political-legal, economic, socio-cultural and technological factors. In such a rapidly changing and growing as well as culturally completely different country like the PRC, the framework conditions and circumstances are of big importance for foreign enterprises willing to do business there. The third chapter deals with possible internationalization strategies for China by showing possibilities of timing and market development strategies plus options for locating business markets. This is also further established in the fourth chapter, in which the internationalization strategies of two German enterprises are analyzed. Furthermore the fourth chapter analyses the internationalization strategies of VW and BMW. At the end of this thesis, the results are summarized in two SWOT-analyses of both firms including measures on how to deal with threats in the PRC and on how to benefit from strengths and opportunities.

Research on the international transfer of technology in economics and management literature has primarily focused on the role of countries and that of companies, in particular multinational enterprises (MNEs). Similarly, economic and business historians have tended to view international technology transfer as a way for economically 'backward' countries to acquire new technologies in order to catch up with more developed economies. This volume provides a more in-depth understanding of how the international transfer of technologies is organized and, in particular, challenges the core-periphery model that is still dominant in the extant literature. By looking beyond national systems of innovation, and statistics on foreign trade, patent registration and foreign direct investment, the book sheds more light on the variety of actors involved in the transfer process (including engineers, entrepreneurs, governments, public bodies, firms, etc.) and on how they make use of a broad set of national and international institutions facilitating technology transfer. Put differently, the volume offers a better understanding of the complexity of global technology flows by examining the role and actions of the different actors involved. By bringing together a number of original case studies covering many different countries over the period from the late 19th to the 21st century, the book demonstrates how technology is being transferred through complex processes, involving a variety of actors from several countries using the national and international institutional frameworks.

"In today's economy, gaining and sustaining a competitive advantage is harder than ever. The civil engineering sector accounts for a significant percentage of global material and energy consumption and is a major contributor of waste material. The ability to recycle and reuse concrete and demolition waste is critical to reducing environmental impacts in meeting national, regional and global environmental targets. Handbook of recycled concrete and demolition waste summarises key recent research in achieving these goals. Part one considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants and the economics of managing construction and demolition waste. Part two reviews key steps in handling construction and demolition waste. It begins with a comparison between conventional demolition and construction techniques before going on to discuss the preparation, refinement and quality control of concrete aggregates produced from waste. It concludes by assessing the mechanical properties, strength and durability of

concrete made using recycled aggregates. Part three includes examples of the use of recycled aggregates in applications such as roads, pavements, high-performance concrete and alkali-activated or geopolymer cements. Finally, the book discusses environmental and safety issues such as the removal of gypsum, asbestos and alkali-silica reaction (ASR) concrete, as well as life-cycle analysis of concrete with recycled aggregates. Handbook of recycled concrete and demolition waste is a standard reference for all those involved in the civil engineering sector, as well as academic researchers in the field. Summarises key recent research in recycling and reusing concrete and demolition waste to reduce environmental impacts and meet national, regional and global environmental targets Considers techniques for managing construction and demolition waste, including waste management plans, ways of estimating levels of waste, the types and optimal location of waste recycling plants Reviews key steps in handling construction and demolition waste

Export Planning

"This book is a one of a kind, definitive reference source for technical students and researchers, government policymakers, and business leaders. It provides an overview of past and present initiatives to improve and commercialize fuel cell technologies. It provides context and analysis to help potential investors assess current fuel cell commercialization activities and future prospects. Most importantly, it gives top executive policymakers and company presidents with detailed policy recommendations as to what should be done to successfully commercialize fuel cell technologies."--pub. desc.

The purpose of this book is to show you how to plan and execute internationalisation within your firm. Export Planning explains a method, following a 10 – step approach, to create your international marketing plan It will enable you to: -Systematically select and plan the entry into new international markets; -Enhance the chances of success through its integrated review of analysis and strategy with marketing, logistics, organisation and finance; -Put together a sound line of reasoning from strategy to implementation. This book provides you with: -An Export Planning – Model: a framework to develop your International Marketing Plan; -4 phases showing you how to set up an Export Policy, Export Audit, Export Plan and Export Roll-out; -10 steps and 5P's for export which can be used as a toolkit; -A checklist to review whether you are ready for export; "The secret of successful international trade can be found in applying the 4C's of marketing and matching them with the 5P's for export: product, performance, partners, people and perseverance." A book for practitioners and thinkers; students and managers.

This book examines the dominance and significance of lean organizing in the international economy. Scholars from each discipline see lean production as positive or negative; the book blends theory with practice by sorting out these different academic views and revealing how lean is implemented in different ways. The first part synthesizes academic research from a range of disciplines—including, engineering, sociology, and management—to present the reader with an integrated understanding of the benefits and drawbacks of lean management. The second part links this theory to practice, with a set of case studies from companies like Apple, Google, Nike, Toyota, and Walmart that demonstrate how lean is implemented in a variety of settings. The book concludes with three models, explaining how Toyotism, Nikefication with offshoring, and Waltonism provide full or less complete models of lean

production. It clearly presents the positive and negative aspects of lean and insights into the culture of lean organizations. With its rich interdisciplinary approach, *Framing and Managing Lean Organizations in the New Economy* will benefit researchers and students across a range of classes from management, sociology, and public policy to engineering.

This book focuses on the development of strategies for the successful internationalization of large and medium-sized companies. Becoming international offers important opportunities for companies of all sizes, but in an increasingly complex environment, the strategic planning involved is also a challenge. The book addresses this, putting forward suggestions that allow large and medium-sized companies to profit from internationalization. After a comprehensive introduction to internationalization and strategic planning, the authors make clear recommendations, suggesting detailed processes for developing international strategies. The book distinguishes between going global for new markets and internationalizing production and sourcing. For both, the book proposes procedures for performing meaningful strategic analyses and for developing successful international strategies. Lastly, it highlights the challenges faced by international companies and discusses useful decision processes. The book offers valuable insights for company executives, participants in Executive MBA programs, and master ' s students.

By tracing the evolution of South Korean state-led capitalism and comparing it with other economies, this book critiques prevalent theories including neoliberalism, the developmental state, and institutionalism, and proposes a theoretical alternative focusing on endogenous changes through elites' competition within and outside the state. Unlike the arguments of neoliberals, this volume asserts that the state can still play an active role in reconstituting the national economy through globalization. The Korean state successfully fosters economic growth by nurturing industrial commons through globalization, rather than by adopting a neoliberal free-market system. This volume asserts that the Korean economy has successfully grown over the past 50 years because it has moved toward a new version of state-led developmentalism. In order to better account for the evolution of state-led developmentalism, this book proposes changes by competition within, as well as outside, the state, in order to bring about changes in developmentalism and the ability to adjust to new contexts. Unlike prevalent accounts of developmental state theory, Changes by Competition argues that the state is neither unitary nor cohesive, but a locus of competition.

The Only Golf Lesson You'll Ever Need, Hank Haney, one of the most respected and sought-after golf instructors in the world, shares the secrets he's learned by observing hundreds of thousands of students--from top PGA Tour pros to high-handicappers. He explains how intelligent observation of your ball-flight tendencies--the way your shot behaves in the air--provides the answers to helping you develop a consistent repeating swing that will lower your scores. You'll also pick up valuable pointers on how to precisely match your equipment to your game. Hank Haney believes that a "flawed swing" that still produces a good shot is a good swing. By focusing on the outcome of your swing first, rather than on the swing itself, he believes you can often avoid making the awkward and unnatural changes to grip, stance, posture and

alignment that many golf instructors ask of their students. The Only Golf Lesson You'll Ever Need will help you straighten your hook or slice, add distance to your drives, identify and fix the flaws in your swing, and become a wizard around the greens. "I'm proud of the way my swing holds up on all kinds of conditions and under the severest pressure. Both are a tribute to Hank Haney and his teaching. Hank knows more about ballflight and what controls it than anyone in the game. And if you understand that, you're on your way." -- Mark O'Meara from the Foreword to The Only Golf Lesson You'll Ever Need

Die Geschichte der Mobilität im 20. Jahrhundert war immer von Faszination und Zukunftshoffnungen geprägt. Kurt Mörsers essayistische Texte zeigen dies für zahlreiche Aspekte der automobilen Massenmotorisierung ebenso wie für Amphibienfahrzeuge oder Elektroluftschiffe. Seine kulturhistorische Perspektive begründet nachdrücklich, warum Mobilität nicht auf die Formel reduziert werden kann, wie man preisgünstig von A nach B kommt. Die von Möser diskutierten Fallbeispiele verdeutlichen, wie emotional aufgeladen die Nutzung von Mobilitätsmaschinen immer war und ist – und zwar auch hinsichtlich ihrer „dunklen“, aggressiven Seiten. Die lange Linie der Mobilitätsgeschichte, wie sie hier entwickelt wird, provoziert Zweifel, ob aktuelle Konzepte für eine Mobilitätswende die kulturelle Dimension von Mobilität angemessen berücksichtigen.

Strategic Management

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.
