WHO | Water-related diseases

Waterborne diseases are linked to significant disease burden worldwide. Waterborne diarrhoeal diseases, for example, are

Page 9/78

responsible for 2 million deaths each year, with the majority occurring in children under 5. Climate change-induced flooding and droughts can impact household water and sanitation infrastructure and related health risks.

Waterborne disease related to unsafe water

Page 10/78

and sanitation

Other examples of such waterborne diseases include polio, giardia, amoebic dysentery, and hepatitis A and E. Water washed diseases, on the hand, are directly related to poor sanitation, lack of personal hygiene, and a lack of water or washing facilities.

Water and sanitation related diseases - FutureLearn

Written by authorities from various related specialties, this book presents the most complete treatment possible of the conditions responsible for water- and sanitation-related diseases, the pathogens and their biology, morbidity and mortality

Page 12/78

resulting from lack of safe water and sanitation, distribution of these diseases, and the conditions that must be met to reduce or eradicate them.

Water and Sanitation - United Nations Sustainable Development

Water, sanitation and hygiene has the potential to prevent at least 9.1% of the global disease burden and 6.3% of all deaths

1. The impact of clean water technologies on public health in the U.S. is estimated to have

Page 22/78

had a rate of return of 23 to 1 for investments in water filtration and chlorination during the first half of the 20th century 5.

Global WASH Fast Facts | Global Water, Sanitation and ...

Sanitation refers to public health conditions

Page 23/78

related to clean drinking water and adequate treatment and disposal of human excreta and sewage. Preventing human contact with feces is part of sanitation, as is hand washing with soap. Sanitation systems aim to protect human health by providing a clean environment that will stop the transmission of disease, especially through the fecal – oral

route.

Sanitation - Wikipedia

How do water, sanitation and hygiene affect health? Water supply, sanitation and health are closely related. Poor hygiene, inadequate quantities and quality of drinking water, and lack of sanitation facilities cause millions of

Page 25/78

the world ' s poorest people to die from preventable diseases each year.
