Fields, Factories, and Workshops is a  
meticulously researched and brilliantly  
argued outline for redirecting agricultural  
and industrial production in a world of  
shrinking resources and increasing human  
needs. More prophetic than utopian, this  
volume remains remarkably pertinent to  
economic conditions at the end of the

twentieth century. With a long intellectual precedent, Kropotkin's rejection of the traditional division of labor presupposes reorganized societies in which nations become economically self-sufficient and abandon global rivalry. His survey of worldwide economic development reveals penetrating insight into the potential of nations just beginning to emerge as major powers. This volume will be of continuing interest to historians, economists, sociologists, and labor studies specialists.
