Revolutionary Bodies is the first English-language primary source – based history of concert dance in the People's Republic of China. Combining over a decade of ethnographic and archival research, Emily Wilcox analyzes major dance works by Chinese choreographers staged over an eighty-year period from 1935 to 2015. Using previously unexamined film footage, photographic documentation, performance programs, and other historical and contemporary sources, Wilcox challenges the commonly accepted view that Soviet-inspired revolutionary ballets are the primary legacy of the socialist era in China's dance field. The digital edition of this title includes nineteen embedded videos of selected dance works discussed by the author.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These include: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

Insights Into Cheng Man Ching's Art

The Routledge Handbook of Sport in Asia

In this ground-breaking book, author Nigel Sutton presents the wisdom, skill and experience of contemporary masters of Cheng Man Ching's Taijiquan as practiced in Malaysia and Singapore. Included are full discussions on training, teaching, Taiji principles, weapons, push hands, sparring, challenge matches, mind-body-spirit development, and stories of the late Master Cheng. Two generations of revered masters discuss Cheng's art in detail, including: Lau Kim Hong, Lee Bei Lei, Zhou Mu Tu, Ho Ah San, Tan Ching Ning, Dr. Fong Fung Tong, Wu Chiang Hsing and Koh Ah Tee. These eight teachers describe their experience which made this art, in 30 short years, the premier fighting style of Taijiquan in Southeast Asia. The masters discuss their experience with Taiji fighting, challenges and applications. This is balanced with discussions of Nei Gong or internal strength training, which is seemingly "lost" amongst Cheng's students in the West. Well known in the West for its role in the New Age movement, this is the first book to openly expose the reality of Cheng style Taijiquan as a fighting art in the words of leading masters from the lineage.

Many homes do not have enough space to practice conventional Tai Chi. Tai Chi master Jesse Tsao explains his spaceless mini Tai Chi, a form combining five major styles in one comprehensive form, which takes only three to five minutes to practice in less than 40 square feet of space. This is the first book to offer a comprehensive overview of the history, development and contemporary significance of sport in Asia. It addresses a wide range of issues central to sport in the context of Asian culture, politics, economy and society. The book explores diverse topics, including the history of traditional Asian sport; the rise of modern sport in Asia; the Olympic Movement in Asia; mega sport events in Asia; sport governance and policy; gender, class and ethnicity in Asian sport, and Asia's sporting heroes and heroines. With contributions from 74 leading international scholars, it offers a new perspective on understanding Asian sport and society, telling the story of how sport in this mega-region is coming together and reshaping the world in the process. It also provides readers with a wide lens through which to better contextualise the relationships between Asia and the world within the global sport community. The Routledge Handbook of Sport in Asia is a vital resource for students and scholars studying the history, politics, sociology, culture and policy of sport in Asia, as well as sport management, sport history, sport sociology, and sport policy and politics. It is also valuable reading for those working in international sport organisations.

Pain Management and the Opioid Epidemic

Taking Physical Activity and Physical Education to School

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

This book teaches what is still the most commonly known tai ji quan style in the world—the Yang family tai ji quan, with a focus on the 40 Movement Routine. A distinguishing feature of the modern Yang style tai ji quan is that because of its simple, gentle movements, it can be learned and practiced by people of virtually all ages and body constitutions. As a means of health cultivation, tai ji quan enhances coordination, strength and flexibility, and harmonizes both the body and mind, which is why it is known to promote mental and physical wellbeing as well as prevent disease. With step-by-step instructions and ample photographs of each posture, this book is the perfect companion for the beginner. We are sorry that the DVD content are not included.

Compiled by a leading scholar of Chinese poetry, Clouds Thick, Whereabouts Unknown is the first collection of Chan (Zen) poems to be situated within Chan thought and practice. Combined with exquisite paintings by Charles Chu, the anthology compellingly captures the ideological and literary nuances of works that were composed, paradoxically, to "say more by saying less," and creates an unparalleled experience for readers of all backgrounds. Clouds Thick, Whereabouts Unknown includes verse composed by monk-poets of the eighth to the seventeenth centuries. Their style ranges from the direct vernacular to the evocative and imagistic. Egan's faithful and elegant translations of poems by Han Shan, Guanxiu, and Qiji, among many others, do justice to their perceptions and insights, and his detailed notes and analyses unravel centuries of Chan metaphor and allusion. In these gems, monk poets join mainstream ideas on poetic function to religious reflection and proselytizing, carving out a distinct genre that come to influence generations of poets, critics, and writers. The simplicity of Chan poetry belies its complex ideology and sophisticated language, elements Egan vividly explicates in his religious and literary critique. His interpretive strategies enable a richer understanding of Mahayana Buddhism, Chan philosophy, and the principles of Chinese poetry. "Charles Egan's presentation does a real service, providing the latest perspectives rather than a rehash of traditional, received accounts. His translations, which form the heart of this book, read smoothly and well. The introduction and the annotations are very well done and make this anthology one to be enjoyed, savored and learned from." Beata Grant. Washington University

Strengthening Forensic Science in the United States

A Path Forward

Tai Chi Bang: Eight-Immortal Flute is an energy practice based on characteristic Tai Chi postures combined with traditional Chinese self-healing meditation and self-defense kung fu. Tai Chi Bang gives an object to focus on between the palms, bonding the two hands moving together, making it easy and fun for beginners to feel the qi (energy), and gain the benefits of Tai Chi practice. Students who find it difficult to quiet their minds find this practice especially effective in gathering attention. Holding the Bang with both palms help them concentrate and be in the moment. The movements of the Bang imitate the movement of the qi inside the body. It relieves stress, gathers in fresh energy, rejuvenates the body and spirit, brings inner calm, and promotes qi and blood circulation.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

This book is an accumulation of Master Marvin Smalheiser's writing in the Tai Chi magazine from its inception in 1977 till 2016. Master Smalheiser was the editor and the owner of Tai Chi magazine, and he published only an article related to tai chi. He was a practitioner as well as a teacher. He lived what he thought was the best way of life: helpful, humble, and down-to-earth. This book covers many aspects and benefits of tai chi as a martial art that Master Smalheiser felt to write about. Some of the topics are meditation, relaxation, self-defense, the types of tai chi, history, health, personal interviews with masters in the US and abroad, and more. It was Master Smalheiser's wish to write books about tai chi, but his untimely death did not allow him to get the books done. I do not know much about tai chi; therefore, I gathered some of his writings and made this book to benefit all the tai chi practitioners as Master Smalheiser wanted. It is my wish that the tai chi enthusiasts will enjoy the book and remember Master Marvin Smalheiser.

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.
